The complete requirements for procurement of the components specified herein are as stated in this specification and the ESCC Generic Specification. Permitted deviations from the Generic Specification, applicable to this specification only, are listed below.

Permitted deviations from the Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirement and do not affect the component's reliability, are listed in the appendices attached to this specification.

#### 2.1.1 <u>Deviations from the Generic Specification</u>

#### 2.1.1.1 Deviations from Qualification and Periodic Tests - Chart F4

(a) Steady State Humidity (85/85): not applicable and shall be replaced in Chart F4 Subgroup 1 of the Generic Specification by a Damp Heat Steady State test as follows:

Components mounted in accordance with Para. 8.6 of ESCC No. 3009 shall be subjected to Test Cab of IEC Publication No. 60068-2-78. The following details shall apply:

- Test Conditions:

Prior to the test, Capacitance shall be measured as specified in Para. 2.4 Intermediate and End-Point Electrical Measurements.

On completion of testing, the components shall be subjected to standard atmospheric conditions for recovery for 6 to 24 hours.

After recovery, the components shall be visually examined. There shall be no evidence of damage. Capacitance, Change in Capacitance, Tangent of Loss Angle and Insulation Resistance shall be measured as specified in Para. 2.4 Intermediate and End-Point Electrical Measurements. Change in Capacitance shall be related to the initial measurements.

The marking shall be in accordance with the requirements of ESCC Basic Specification No. 21700 and as follows.

The information to be marked on the component or its primary package shall be:

- (a) The ESCC qualified components symbol (for ESCC qualified components only).
- (b) The ESCC Component Number (see Para. 1.4.1).
- (c) Traceability information.
