

DOCUMENT CHANGE REQUEST

DCR number 836

Changes required for: General

Originator: MERCADIE John

Date: 2014/04/14

Date sent: 2014/01/16

Organisation: MINCO SAS

Status: IMPLEMENTED

Title: Resistors, Heater, Flexible, Single and Double Layer, Based on Type FHK

Number: 4009/003

Issue: 1

Other documents affected:

Page:

Paragraph:

Original wording:

Proposed wording:

Justification:

Point 1: MINCO expressed a preference to perform full serialization and read & record electrical measurement during Screening Tests for commercial reasons.

Point 2 : Change the requirement for rapid change of temperature test to have alternate mounting with optional measurements (at the manufacturers discretion) during and after the test. The test is used by MINCO during screening purely as a means of mechanical stabilization for the kapton bonding process and hence special mounting with electrical tests are not considered mandatory.

Point 3 : the visual inspection could judge the results of this test. Electrical testing is still performed after burn-in

The 3 points above are also cost effective impact and they are already implemented in 4009/002.
