1. **GENERAL**

1.1 SCOPE

This specification details the ratings, physical and electrical characteristics, test and inspection data for a silicon, monolithic, high speed CMOS Asynchronous Negative-Edge-Triggered 7-Bit Binary Counter, having fully buffered outputs, based on Type 54HC4024. It shall be read in conjunction with ESA/SCC Generic Specification No. 9000, the requirements of which are supplemented herein.

1.2 <u>COMPONENT TYPE VARIANTS</u>

Variants of the basic type integrated circuits specified herein, which are also covered by this specification, are given in Table 1(a).

1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the integrated circuits specified herein, are as scheduled in Table 1(b).

Maximum ratings shall only be exceeded during testing to the extent specified in this specification and when stipulated in Test Methods and Procedures of the applicable ESA/SCC Generic Specification.

1.4 PARAMETER DERATING INFORMATION (FIGURE 1)

Not applicable.

1.5 PHYSICAL DIMENSIONS

As per Figure 2.

1.6 PIN ASSIGNMENT

As per Figure 3(a).

1.7 TRUTH TABLE

As per Figure 3(b).

1.8 <u>CIRCUIT SCHEMATIC</u>

As per Figure 3(c).

1.9 FUNCTIONAL DIAGRAM

As per Figure 3(d).

1.10 HANDLING PRECAUTIONS

These devices are susceptible to damage by electrostatic discharge. Therefore, suitable precautions shall be employed for protection during all phases of manufacture, testing, packaging, shipment and any handling.

These components are Categorised as Class 2 with a Minimum Critical Path Failure Voltage of 2500 Volts.

1.11 <u>INPUT AND OUTPUT PROTECTION NETWORKS</u>

Protection networks shall be incorporated into each input and output as shown in Figure 3(e).

NOTES

- 1. Device is functional for $2.0V \le V_{DD} \le 6.0V$.
- 2. Input current limited to $I_{IC} = \pm 20$ mA.
- 3. Output current limited to $I_{OUT} = \pm 25 \text{mA}$.
- 4. The maximum device dissipation is determined by I_{DDop} max. (50mA) x 6.0V.
- 5. Duration 10 seconds maximum at a distance of not less than 1.5mm from the device body and the same lead shall not be resoldered until 3 minutes have elapsed.
- 6. Duration 5 seconds maximum and the same terminal shall not be resoldered until 3 minutes have elapsed.

NOTES TO FIGURES 2(a) TO 2(g) INCLUSIVE

- 1. Index area: a notch, letter or dot shall be located adjacent to Pin 1 and shall be within the shaded area shown. For chip carrier packages the index shall be as defined in Figures 2(c) and 2(f).
- 2. Dimension Q shall be measured at the point of exit of the lead from the body.
- 3. The dimension shall be measured from the seating plane to the base plane.
- 4. The dimension allows for off-centre lids, meniscus and glass overrun.
- 5. The true position pin or terminal spacing is 1.27mm between centrelines. Each pin or terminal centreline shall be located within ± 0.13 mm of it's true longitudinal position relative to Pin 1 and the highest pin number.
- 6. The true position pin spacing is 2.54mm between centrelines. Each pin centreline shall be located within ±0.25mm of it's true longitudinal position relative to Pin 1 and the highest pin number.
- 7. Applies to all 4 corners.
- 8. All leads or terminals.
- 9. 12 spaces for flat, SO and dual-in-line packages.16 spaces for chip carrier packages.
- 10. Lead centreline when α is 0°.
- 11. Index corner only 2 dimensions.
- 12. 3 non-index corners 6 dimensions.
- 13. For all pins, either pin shape may be supplied.

2. APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:-

- (a) ESA/SCC Generic Specification No. 9000 for Integrated Circuits.
- (b) MIL-STD-883, Test Methods and Procedures for Micro-electronics.

3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply. In addition, the following symbols are used:

V_{IC} = Input Clamp Voltage.

I_{IC} = Input Clamp Diode Current.

4. REQUIREMENTS

4.1 GENERAL

The complete requirements for procurement of the integrated circuits specified herein are stated in this specification and ESA/SCC Generic Specification No. 9000 for Integrated Circuits. Deviations from the Generic Specification, applicable to this specification only, are listed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

4.2 <u>DEVIATIONS FROM GENERIC SPECIFICATION</u>

4.2.1 <u>Deviations from Special In-process Controls</u>

- (a) Para. 5.2.2, Total Dose Irradiation Testing: Shall be performed during irradiation qualification and maintenance of qualification.
- (b) Para. 5.2.2, Total Dose Irradiation Testing: Shall be performed during procurement on an irradiation lot acceptance basis at the total dose irradiation level specified in the Purchase Order.

4.2.2 <u>Deviations from Final Production Tests (Chart II)</u>

None.

4.2.3 <u>Deviations from Burn-in Tests (Chart III)</u>

None.

4.2.4 <u>Deviations from Qualification Tests</u> (Chart IV)

None.

Rev. 'B'

PAGE 19 ISSUE 1

4.2.5 <u>Deviations from Lot Acceptance Tests (Chart V)</u>

None.

4.3 MECHANICAL REQUIREMENTS

4.3.1 Dimension Check

The dimensions of the integrated circuits specified herein shall be checked. They shall conform to those shown in Figure 2.

4.3.2 Weight

The maximum weight of the integrated circuits specified herein shall be 2.2 grammes for the dual-in-line package, 0.7 grammes for the flat and SO packages and 0.6 grammes for the chip carrier package.

4.4 MATERIALS AND FINISHES

The materials shall be as specified herein. Where a definite material is not specified, a material which will enable the integrated circuits specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 <u>Case</u>

The case shall be hermetically sealed and have a metal body with hard glass seals or a ceramic body and the lids shall be welded, brazed, preform-soldered or glass frit sealed.

4.4.2 Lead Material and Finish

For dual-in-line and flat packages, the material shall be Type 'G' with either Type '4' or Type '2 or 8' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500. For chip carrier packages the finish shall be Type '2', Type '4' or Type '7' in accordance with the requirements of ESA/SCC Basic Specification No. 23500. For SO ceramic packages, the material shall be Type 'G' with either Type '2' or Type '4' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500. (See Table 1(a) for Type Variants).

4.5 MARKING

4.5.1 General

The marking of all components delivered to this specification shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700. Each component shall be marked in respect of:-

- (a) Lead Identification.
- (b) The SCC Component Number.
- (c) Traceability Information.

4.5.2 Lead Identification

For dual-in-line, flat and SO packages, an index shall be located at the top of the package in the position defined in Note 1 to Figure 2 or, alternatively, a tab may be used to identify Pin No. 1. The pin numbering must be read with the index or tab on the left-hand side. For chip carrier packages, the index shall be as defined by Figures 2(c) and 2(f).

PAGE 20 ISSUE 1

4.5.3 The SCC Component Number

Each component shall bear the SCC Component Number which shall be constituted and marked as follows:

	<u>920407701</u> B F T T T T
Detail Specification Number -	
Type Variant (see Table 1(a))	
Testing Level (B or C, as applicable)	
Total Dose Irradiation Level (if applicable)	

The Total Dose Irradiation Level designation shall be added for those devices for which a sample has been successfully tested to the level in question. For these devices, a code letter shall be added in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

4.5.4 <u>Traceability Information</u>

Each component shall be marked in respect of traceability information in accordance with the requirements of ESA/SCC Basic Specification No. 21700.

4.6 ELECTRICAL MEASUREMENTS

4.6.1 <u>Electrical Measurements at Room Temperature</u>

The parameters to be measured in respect of electrical characteristics are scheduled in Table 2. Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.6.2 <u>Electrical Measurements at High and Low Temperatures</u>

The parameters to be measured at high and low temperatures are scheduled in Table 3. The measurements shall be performed at $T_{amb} = +125 (+0.5)$ °C and -55 (+5.0) °C respectively.

4.6.3 <u>Circuits for Electrical Measurements</u>

Circuits and test sequences for use in performing electrical measurements listed in Tables 2 and 3 of this specification are shown in Figure 4.

4.7 BURN-IN TESTS

4.7.1 Parameter Drift Values

The parameter drift values applicable to H.T.R.B. and Power Burn-in are specified in Table 4 of this specification. Unless otherwise stated, measurements shall be performed at $T_{amb} = +22\pm3$ °C. The parameter drift values (Δ) applicable to the parameters scheduled, shall not be exceeded. In addition to these drift value requirements, the appropriate limit value specified for a given parameter in Table 2 shall not be exceeded.

For H.T.R.B. Burn-in, the parameter drift values (Δ) shall be applied before the N-Channel (0 hours) and after the P-Channel (144 hours) burn-in.

4.7.2 Conditions for H.T.R.B. and Power Burn-in

The requirements for H.T.R.B. and Power Burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 9000. The conditions for H.T.R.B. and Power Burn-in shall be as specified in Tables 5(a), 5(b) and 5(c) of this specification.

4.7.3 <u>Electrical Circuits for H.T.R.B and Power Burn-in</u>

Circuits for use in performing the H.T.R.B. and Power Burn-in tests are shown in Figures 5(a), 5(b) and 5(c) of this specification.

ISSUE 1

TABLE 2 - ELECTRICAL MEASUREMENTS AT ROOM TEMPERATURE (CONT'D)

NOTES

- 1. Maximum time to output comparator strobe 30µs.
- 2. Test each pattern of Figure 4(a).
- 3. Guaranteed but not tested.
- 4. Measurements shall be performed on a 100% basis go-no-go, with read and record on a sample basis, LTPD7 (32 pieces) after Chart III (Burn-in) Tests.
- 5. Measurement performed on a sample basis, LTPD 7 or lower (see Annexe I of ESA/SCC 9000).
- 6. A pulse, having the following conditions shall be applied to the clock input: $V_P = 0V$ to V_{DD} Vdc. Maximum clock frequency $f_{(CL)}$ requirement is considered met if proper output state changes occur with the pulse repetition rate set to that give in the "Limits" column.

6	Pulse Frequency Square Wave	f	100k ± 10% 50 ± 15% Duty Cycle $t_r = t_f \le 400$ ns	Hz
7	Positive Supply Voltage (Pin D/F 14) (Pin C 20)	V _{DD}	6.0(+0-0.5)	V
8	Negative Supply Voltage (Pin D/F 7) (Pin C 10)	V _{SS}	0	V

NOTES

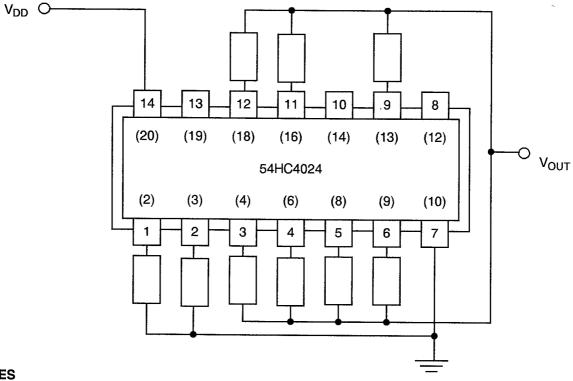

- 1. Input Protection Resistor = 680Ω min. to $47k\Omega$ max.
- 2. Output Load = $1k\Omega$ min. to $10k\Omega$ max.

ISSUE 1

4.8 <u>ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC SPECIFICATION NO. 9000)</u>

4.8.1 <u>Electrical Measurements on Completion of Environmental Tests</u>

The parameters to be measured on completion of environmental tests are scheduled in Table 6. Unless otherwise stated, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.2 <u>Electrical Measurements at Intermediate Points during Endurance Tests</u>

The parameters to be measured at intermediate points during endurance tests are as scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.3 <u>Electrical Measurements on Completion of Endurance Tests</u>

The parameters to be measured on completion of endurance testing are as scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.4 Conditions for Operating Life Tests

The requirements for operating life testing are specified in Section 9 of ESA/SCC Generic Specification No. 9000. The conditions for operating life testing shall be as specified in Table 5(c) of this specification.

4.8.5 <u>Electrical Circuits for Operating Life Tests</u>

Circuits for use in performing the operating life tests are shown in Figure 5(c) of this specification.

4.8.6 Conditions for High Temperature Storage Test

The requirements for the high temperature storage test are specified in ESA/SCC Generic Specification No. 9000. The temperature to be applied shall be the maximum storage temperature specified in Table 1(b) of this specification.

4.9 TOTAL DOSE IRRADIATION TESTING

4.9.1 Application

If specified in Para. 4.2.1 of this specification, total dose irradiation testing shall be performed in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

4.9.2 Bias Conditions

Continuous bias shall be applied during irradiation testing as shown in Figure 6 of this specification.

4.9.3 <u>Electrical Measurements</u>

The parameters to be measured prior to irradiation exposure are scheduled in Table 2 of this specification. Only devices which meet the requirements of Table 2 shall be included in the test sample.

The parameters to be measured during and on completion of irradiation testing are scheduled in Table 7 of this specification.
