The complete requirements for procurement of the connectors specified herein shall be as stated in this specification and ESCC Generic Specification No. 3401. Deviations from the Generic Specification, applicable to this specification only, are listed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification..

4.2 DEVIATIONS FROM GENERIC SPECIFICATION

4.2.1 Deviations from Special In-process Controls

None.

4.2.2 Deviations from Final Production Tests (Chart II)

- (a) Para. 9.5, Magnetism Level: Not applicable.
- (b) For plugs with lanyard (Shell Type 78): Before External Visual Inspection, the lanyard shall be submitted to a distortion resistance test.

A pull force of 93daN minimum shall be applied to the lanyard by means of a mandrel of 6.35mm diameter for 5 seconds. The force shall then be released, and the terminals shall be checked for distortion. Distortion shall not exceed 0.025mm in the direction of the application of the force.

- (e) Para. 9.24, Jackscrew Retention: Not applicable.
- (f) For plugs with lanyard (Shell Type 78): At the end of Subgroup III, the lanyard shall be submitted to a tensile strength test. Prior to application of the load, the lanyard shall be marked at the point where it enters the swaging end of the terminal.

A force of 155daN minimum shall be applied to the lanyard by means of a mandrel of 6.35mm diameter for 5 seconds. Breaking of the cable before reaching the specified load, any slippage of the cable in the fitting, or any sign of failure in the terminal shall constitute failure.
