The value of the Q factor shall be determined at 100MHz by using the following formula:

$$Q_{fo} = Q_m \times (f_m/f_o)^{3/2}$$

where  $Q_m$  is the Q factor read at frequency  $f_m$  ( $f_m$  is that frequency where the quarter-wave line, including the capacitance being measured, is resonating) and  $f_o = 100\text{MHz}$ .

The record sheet shall indicate the Q factor at 100MHz, as required by Table 2 of this specification, as well as the frequency  $f_m$  at which the Q factor was read.

For LAT level 3: The measurements of the Q factor required by Table 2 of this specification must be done before Solderability.
