APPENDIX A

AGREED DEVIATIONS FOR TEKELEC (F)

ITEMS AFFECTED	DESCRIPTION OF DEVIATIONS
Para. 9.3 - Electrical and Mechanical Measurements	Para. 9.3.1.5, Quality Factor of ESCC Generic Specification No. 3010 and Table 2 of this specification. Measurement of the Q factor shall be performed at frequencies comprised between 100 and 400 MHz. The value of the Q factor shall be determined at 100MHz by using the following formula: $Qfo = Qm \times (fm/fo)^{3/2}$ where Qm is the Q factor read at frequency fm (fm is that frequency where the quarter-wave line, including the capacitance being measured, is resonating) and fo = 100MHz. The record sheet shall indicate the Q factor at 100MHz, as required by Table 2 of this specification, as well as the frequency fm at which the Q factor was read.
Chart V - Lot Acceptance Testing	For LAT level 3: The measurements of the Q factor required by Table 2 of this specification must be done before Solderability.
