DCR No.	CHANGE DESCRIPTION
859	Specification upissued to incorporate changes per DCR.

TABLE OF CONTENTS

1 GENERAL

1.1 SCOPE

This specification details the ratings, physical and electrical characteristics, test and inspection data for Cable, “spacewire”, round, quad using symmetric cables, flexible, -200 to +180°C. It shall be read in conjunction with ESCC Generic Specification No. 3902, the requirements of which are supplemented herein.

1.2 COMPONENT TYPE VARIANTS

Variants of the basic types of datalines specified herein, which are also covered by this specification are given in Table 1(a).

1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the finished datalines specified herein, are as scheduled in Table 1(b).

1.4 PARAMETER DERATING INFORMATION (FIGURE 1)

The derating information applicable to the finished wires and cables specified herein is as follows:

- The maximum current for each wire used in a bundle shall be:

$$I_{Bmax} = I_{max} \times \frac{29 - n}{28} \text{ (for } 1 \leq n \leq 15\text{)}$$

$$I_{Bmax} = \frac{I_{max}}{2} \text{ (for } n > 15\text{)}$$

  where n = number of wires in the bundle

- The temperature derating information is shown in Figure 1(a) with maximum current I_{max} for a single wire.
- The derating factors contained herein indicate maximum stress values and do not preclude further derating.

1.5 PHYSICAL DIMENSIONS AND CHARACTERISTICS

The physical dimensions and characteristics of the datalines specified herein, are shown in Table 1(a) and Figure 2 respectively.

1.6 FUNCTIONAL DIAGRAM

Not applicable.

TABLE 1(b) - MAXIMUM RATINGS

No.	Characteristics	Symbol	Maximum Rating	Unit	Remarks
1	Operating Voltage (Continuous)	V_{op}	200	Vrms	-
2	Current Variant 01 Variant 02	I	 1.5 2.5	A	See Figure 1(a)
3	Operating Frequency	f_M	400	MHz	10 metres
4	Data Transmission Rate Variant 01 Variant 02	DTR	 100 200	Mbit/s	Assembly
5	Operating Temperature Range	T_{op}	-200 to +180	°C	T_{amb} Note 1
6	Storage Temperature Range	T_{stg}	-200 to +180	°C	-
7	Soldering Temperature	T_{sol}	+250	°C	Note 2

NOTES

1. Precautions shall be taken such that the aggregate temperature of the datalines (ambient plus rise), due to power dissipation, does not exceed the maximum operating temperature.
2. For 5 seconds maximum.

2 APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:

(a) ESCC Generic Specification No. 3902 for Cables, Coaxial, Radio Frequency, Flexible.
(b) ESA PSS-01-301, Derating Requirements applicable to Electronic, Electrical and Electro-Mechanical Components.
(c) MIL-C-17, Cables Radio Frequency, Flexible and Semirigid, General Specification for.
(d) IEC Publication No. 96-1, Radio Frequency Cables, Part 1: General Requirements and Measuring Methods.

3 TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESCC Basic Specification No. 21300 and ESCC Generic Specification No. 3902 shall apply. In addition, the following definitions shall be used:

Cables	=	Datalines (general term).
Symmetric Cable	=	Balanced Shielded Lines.
BS	=	Braided Shield.
SC	=	Symmetric Cable.
RC	=	Round Cable.

4 REQUIREMENTS

4.1 GENERAL

The complete requirements for procurement of the finished round cable specified herein shall be as stated in this specification and ESCC Generic Specification No. 3902. Deviations from the Generic Specification, applicable to this Detail Specification only, are listed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

4.2 DEVIATIONS FROM GENERIC SPECIFICATION

4.2.1 Deviations from Special In-Process Controls

(a) Para. 5.3.1, Insulation Flaws (Spark Test): Shall be performed using 1.4kV at 3.0kHz.

4.2.2 Deviations from Final Production Tests (Chart II)

(a) Para. 9.7, Voltage Test: To be performed in accordance with Para. 4.8.13 of this specification.
(b) Para. 9.10, Characteristic Impedance: To be performed in accordance with Para. 4.8.14 of this specification.
(c) Para. 9.11, Attenuation: Shall not be performed.
(d) Para. 9.12, Structural Return Loss: Shall not be performed.

4.2.3 Deviations from Burn-in and Electrical Measurements (Chart III)

None.

4.2.4 Deviations from Qualification Tests (Chart IV)

(a) Para. 9.7, Voltage Test: To be performed in accordance with Para. 4.8.13 of this specification.
(b) Para. 9.10, Characteristic Impedance: to be performed in accordance with Para. 4.8.14 of this specification.
(c) Para. 9.11, Attenuation: Shall not be performed.
(d) Para. 9.12, Structural Return Loss: Shall not be performed.
(e) Shielding Effectiveness: Shall be performed in accordance with Para. 4.8.17 of this specification at any point in Chart IV.

4.2.5 Deviations from Lot Acceptance Tests (Chart V)

(a) Para. 9.11, Attenuation: Shall not be performed.
(b) Para. 9.12, Structural Return Loss: Shall not be performed.

4.3 MECHANICAL REQUIREMENTS

4.3.1 Dimension Check

The dimensions of the datalines specified herein shall be checked. They shall conform to those shown in Table 1(a), Figure 2 and Para. 4.4 of this specification (see the Table following for list of parameters to be checked).

LIST OF PARAMETERS TO BE CHECKED

PARAMETER	TABLE 1(a)	FIGURE 2	PARA 4.4

4.3.2 Weight

The maximum weight of the datalines specified herein shall be measured in accordance with Para. 9.2 of ESCC Generic specification No. 3902 and shall be as specified in Table 1(a) of this specification.

4.3.3 Adhesion of the Inner Conductor

Minimum stripping force: 1N.

4.4 MATERIALS AND FINISHES

The materials and finishes shall be as specified herein. Where a definite material is not specified, a material which will enable the components specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 Construction of Round Cable

4.4.1.1 Generic Construction

The round cable with symmetric cables consists of four impedance controlled datalines with an overall outer shield and outer jacket. The datalines are constructed such that two conductors, each evenly centred within a dielectric, are twisted together with two fillers and then covered by an inner shield and jacket in accordance with Figure 2(a) and Figure 2(c). Variant 02 also includes a binder under the inner shield.

4.4.1.2 Lay Length of Symmetric Cables

The lay length of all symmetric cables twisted together shall not be less than 12 times and not more than 16 times the outside diameter of the unshielded and unjacketed cable. This requirement will lead to the following lay length and/or twist per metre respectively.

Variant	Lay Length (mm)		Twists/m	
	Min	Max	Min	Max
01	24	32	32	41
02	27	35	29	37

4.4.1.3 Lay Length of the Complete Round Cable

Four sets of symmetric cables twisted together shall not be less than 12 times and not more than 16 times the outside diameter of two symmetric cables. This requirement will lead to the following lay length. This construction shall be the core to be covered by a binder and a braided outer shield, i.e. outer conductor. This construction is then covered by an outer jacket in accordance with Figure 2(b) and Figure 2(d).

Variant	Lay Length (mm)	
	Min	Max
01	57	77
02	74	98

4.4.2 Inner Conductor

4.4.2.1 Material Characteristics

All strands used in the manufacture of the conductor shall be silver-coated high strength copper alloy.

On silver-coated strands, the thickness of silver shall be 2µm minimum.

For high strength copper alloy conductors, the tensile characteristics shall be not less than 6% in elongation and 35kg/mm^2 in tensile strength.

For determination of the conductor resistance at +20°C, as mentioned in Para. 9.5 of ESCC Generic Specification No. 3902, the α coefficient for copper alloy is 0.0035.

4.4.2.2 Stranding

The conductors shall be constructed of concentrically laid strands so as to produce a smooth and uniform conductor of circular cross-section and free from any high strands or other surface irregularities.

The length of lay of the external layer shall be not less than 8, nor more than 16 times the maximum conductor diameter specified in Table 1(a).

4.4.3 Dielectric

4.4.3.1 Material

Any dielectric material shall be virgin material, i.e. expanded, microporous PTFE or wrapped PTFE with only those additives that are necessary for processing and pigmentation.

Variant	Material
01, 02	Expanded, microporous PTFE

4.4.3.2 Construction

The dielectric shall have a uniform cross-section throughout the length of the inner core or wire and the conductor shall be evenly centred in the dielectric.

The nominal diameter of the dielectric shall be in accordance with Table 1(a)(insulated wire)

4.4.4 Filler

Fillers shall be used so as to ensure a smooth and uniform diameter under the shielding in order to contribute to a uniform impedance over the length of the cable.

4.4.4.1 Material

The filler material as used for the symmetric cables shall be expanded, microporous PTFE with only those additives necessary for processing.

The filler material as used for the round cable shell shall be PTFE with only the additives necessary for processing.

4.4.4.2 Construction

The filler material shall be extruded or wrapped from tapes to the diameters as given in Table 1(a).

4.4.5 Binder

Binders shall be used as appropriate over the symmetric cable core for Variant 02 only and over the completed round cable core for both Variants 01 and 02.

4.4.5.1 Material

The material shall be virgin, wrapped, expanded, microporous PTFE with only those additives necessary for processing.

4.4.5.2 Construction

The material shall be wrapped with an overlap of 50% maximum.

4.4.6 Shield

The terms “inner shield” and “outer shield” shall be used.

1 type of shield shall be used:

- Braided Shield (BS)

4.4.6.1 Material Characteristics

All strands shall meet the requirements for silver-coated annealed copper as outlined in Para. 4.4.2.1 of this specification, but the thickness of silver shall be 2.5µm minimum.

Any strand shall show a 10% minimum elongation.

4.4.6.2 Construction

The strand size shall be as specified in Table 1(a) of this specification.

Braided Shield: The braided shield type shall be of push-back type and provide not less than 90% coverage. The coverage factor K is calculated as follows:

$$K = (2F - F^2)$$

$$F = \frac{N \times P \times d}{\sin \alpha}$$

$$\tan \alpha = 2\pi \frac{(D \times 2d) \times P}{C}$$

K = coverage (%).
N = number of strands.
P = serving pitch/mm.
d = shield strand diameter (mm).
α = angle of shield with cable axis in degrees.
D = effective diameter of core under shield (mm).
C = number of carriers.

4.4.7 Jacket

The cable shall have jackets for each of the inner symmetric cables and an outer jacket for the complete round cable.

4.4.7.1 Material Characteristics

The material shall be a layer of extruded fluoropolymer PFA, with only those additives that are necessary for processing and pigmentation.

4.4.7.2 Construction

The PFA shall be extruded such that the construction underneath is centred evenly within the jacket. The wall thickness for the inner jackets shall be 0.2mm maximum, and for the outer jacket 0.25mm maximum.

4.4.8 Colours

The dielectric material, the fillers and binders shall be white.

The jacket colour for Variant 01 shall be white.

The jacket colour for Variant 02 shall be blue.

4.5 MARKING

4.5.1 General

The marking of all spools of finished datalines delivered to this specification shall be in accordance with the requirements of ESCC Basic Specification No. 21700. Each spool shall be marked in respect of:

(a) The ESCC Component Number.
(b) Characteristics
(c) Traceability Information.
(d) Additional Marking.

4.5.2 The ESCC Component Number

Each components shall bear the ESCC Component Number which shall be constituted and marked as follows:

Example: 390200301B

- Detail Specification Number: 3902003
- Type Variant (See Table 1(a)): 01
- Testing Level: B

4.5.3 Characteristics

The characteristics shall show the length(s) of the finished dataline wound on each spool and shall be marked as follows:

Example: 100m

- Length in metres (see Note): 100
- Symbol for metres: m

NOTE

1. Whenever the length is less than 100 metres, insert a zero in the first block (example: 075m) If more than 1 length of finished dataline is wound on a spool, the characteristics of each length shall be marked as above.

4.5.4 Traceability Information

Each spool shall be marked in respect of Traceability information in accordance with ESCC Basic Specification No. 21700.

4.5.5 Additional Marking

Each spool shall bear the Manufacturer's Quality Control Inspector's stamp.

4.6 ELECTRICAL MEASUREMENTS

4.6.1 Electrical Measurements at Room Temperature

The parameters to be measured at room temperature are scheduled in Table 2. Unless otherwise specified these measurements shall be performed at T_{amb} = +22 ±3°C.

4.6.2 Electrical Measurements at High and Low Temperatures

Not applicable.

4.6.3 Circuits for Electrical Measurements (Figure 4)
Not applicable

4.7 BURN-IN TESTS
Not applicable.

4.8 ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESCC GENERIC SPECIFICATION No. 3902)

4.8.1 Mechanical Properties of Conductor
As detailed in Paras. 4.4.2.1 and 4.4.6.1 of this specification.

4.8.2 Alternate Bending Resistance
The applied weights and bending diameter for alternate bending resistance are given in Table A.

Number of cycles: 500 minimum.

TABLE A - ALTERNATE BENDING RESISTANCE, LOAD AND DIAMETER

Type	Z_0 (Ω)	Weight (kg)	Bending Diameter (mm)
RC Variant 01	100	1.3	70
RC Variant 02	100	1.5	90

4.8.3 Accelerated Ageing Stability
Ageing temperature : +200 ±5°C

Shrinkage/Protrusion : See Table B.

Wrap Test : Mandrel diameters as per Table C.

TABLE B - SHRINKAGE/PROTRUSION

Type	Z_0 (Ω)	Max. Shrinkage or Protrusion (mm)
RC Variant 01, 02	100	2

Maximum Capacitance Change: +7%

4.8.4 Cold Bend Test
Chamber temperature : -80 ±5°C

Mandrel diameter and load : See Table C.

TABLE C - COLD BEND TEST, MANDREL DIAMETER AND LOADS

Type	Z_0 (Ω)	Weight (kg)	Mandrel Diameter (mm)
RC Variant 01	100	1.3	70
RC Variant 02	100	1.5	90

4.8.5 Solderability
No particular conditions are applicable.

4.8.6 Corona Extinction Voltage
As per Table 2.

4.8.7 Resistance to Fluids
No particular conditions are applicable.

4.8.8 Flammability Resistance
No particular conditions are applicable.

4.8.9 Radiation Resistance
(a) Insulation Resistance: Shall stay within specified limits, see Table 2.
(b) Voltage Test: Shall stay within specified limits, see Table 2.
(c) Maximum Capacitance Change: +7%.
(d) Maximum Impedance Change: +7%.
(e) Corona extinction voltage: Shall stay within specified limits, see Table 2.

4.8.10 Outgassing
No particular conditions are applicable.

4.8.11 Long-term Ageing Test
Ageing temperature: +180 ±5°C.

(a) Insulation Resistance: Shall stay within specified limits, see Table 2.
(b) Voltage Test: Shall stay within specified limits, see Table 2.
(c) Maximum Capacitance Change: +7%.
(d) Maximum Impedance Change: +7%.
(e) Corona extinction voltage: Shall stay within specified limits, see Table 2.

4.8.12 Atomic Oxygen Resistance
The outer surface of the datalines is resistant against atomic oxygen and shall be verified in accordance with the requirements of the ESCC Executive.

4.8.13 Voltage Test
The voltage test shall be performed in accordance with ESCC Generic specification No. 3902, Para. 9.7 with the exception that the whole length of each produced lot shall be tested with the DC voltages specified in Table 2 for a minimum of 1 minute.

4.8.14 Characteristic Impedance
The characteristic impedance of all symmetric cables shall be measured according to MIL-C-17, Para. 4.8.7 using a time domain reflectometer (TDR), with a symmetrical input/output. All measurements shall be performed on cables with a minimum length of 3 metres.

Impedance reference shall be defined before test.

4.8.15 Attenuation
Not applicable.

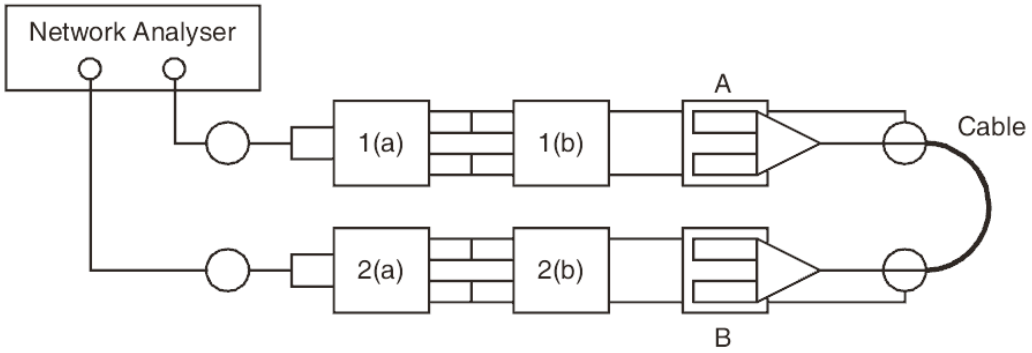
4.8.16 Structural Return Loss
Not applicable.

4.8.17 Shielding Effectiveness

The shielding effectiveness of the cables shall be determined. Since the shielding effectiveness or transfer impedance respectively is a characteristic which is dependent only on constructional parameters, its performance shall be measured only once during qualification in accordance with IEC 96-1, 46 A 142 and Figure 1(b) of this specification.

4.8.18 Time Delay

The time delay of the balanced shielded lines shall be measured in accordance with Table 2 using a network analyser on a minimum length of 3 metres.



1(a) and 2(a) : Symmetrical Transformers (1 x 50Ω to 2 x 50Ω)

1(b) and 2(b) : Impedance Matching (50Ω to 75/100/120Ω)

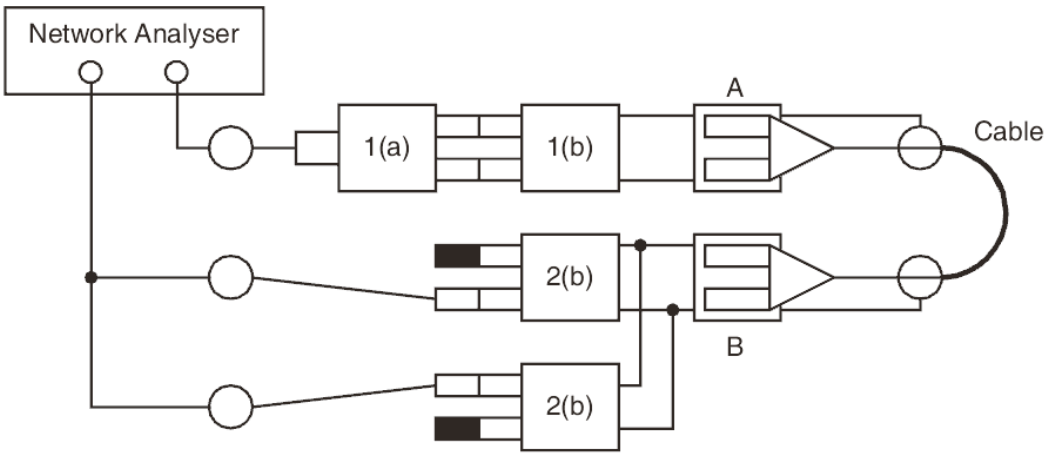
A and B : Clamp connection

A symmetrical 50Ω signal will be produced by the network analyser (0.3 - 3000MHz), split into 2 symmetrical signals 1(a) and transformed to the desired impedance of the balanced shielded line under test 1(b). After the signal has passed the cable under measurement, the signal will be impedance matched to 50Ω 2(b) and retransformed to a single signal 2(a).

The specimen cable is connected to input and output A and B, and the time delay between input and output is measured and displayed by the network analyser.

4.8.19 Time Delay Conductor Difference

The time delay conductor difference of the balanced shielded lines shall be measured in accordance with Table 2 using a network analyser on a minimum length of 3 metres.



1(a) and 2(a) : Symmetrical Transformers (1 x 50Ω to 2 x 50Ω)

1(b) and 2(b) : Impedance Matching (50Ω to 75/100/120Ω)

A and B : Clamp connection

A symmetrical 50Ω signal will be produced by the network analyser (0.3 - 3000MHz), split into 2 symmetrical signals 1(a) and transformed to the desired impedance of the balanced shielded line under test 1(b). After the signal has passed 1 line of the symmetric cable, connected to input A and output B, the signal will be impedance matched to 50Ω 2(b). The 1 open port of the impedance matching pad will be terminated by 50Ω.

This procedure shall be repeated for the second single line of the symmetric cable, and both values shall be compared, with the conductor difference displayed by the network analyser.

APPENDIX A

AGREED DEVIATIONS FOR AXON CABLE (F)

ITEMS AFFECTED	DESCRIPTION OF DEVIATIONS
Para. 4.4.8	White insulator layer and blue insulator layer will be used for the two wires of the single symmetric cable. Different filler colours will be used to differentiate each single symmetric cable of the round cable: white, blue, red, black
Para. 4.4.7.2	The wall thickness for the inner jackets shall be 0.15mm maximum and for the outer jacket 0.5mm maximum.
