# 1 **GENERAL**

#### 1.1 SCOPE

This specification details the ratings, physical and electrical characteristics, and test and inspection data for the component type variants and/or the range of components specified below. It supplements the requirements of, and shall be read in conjunction with, the ESCC Generic Specification listed under Applicable Documents.

#### 1.2 APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:

(a) ESCC Generic Specification No. 3009.

### 1.3 TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESCC Basic Specification No. 21300 shall apply.

#### 1.4 THE ESCC COMPONENT NUMBER AND COMPONENT TYPE VARIANTS

#### 1.4.1 The ESCC Component Number

The ESCC Component Number shall be constituted as follows:

Example: 300900801680KE

- Detail Specification Reference: 3009008
- Component Type Variant Number: 01 (as required)
- Characteristic code: Capacitance Value (68pF): 680 (as required)
- Characteristic code: Capacitance Tolerance (±10%): K (as required)
- Rating code: Rated Voltage (100V): E (as required)

#### 1.4.1.1 Characteristics and Ratings Codes

Characteristics and ratings to be codified as part of the ESCC Component Number shall be as follows:

(a) Rated Capacitance Value C<sub>n</sub> expressed by means of the following codes in accordance with ESCC Basic Specification No. 21700. The unit quantity shall be picofarad (pF).

| Capacitance Value C <sub>n</sub> (pF) | Code |
|---------------------------------------|------|
| XX                                    | XX0  |
| XX 10 <sup>1</sup>                    | XX1  |
| XX 10 <sup>2</sup>                    | XX2  |
| XX 10 <sup>3</sup>                    | XX3  |
| XX 10 <sup>4</sup>                    | XX4  |

(b) Capacitance Tolerance expressed by the following codes in accordance with ESCC Basic Specification No. 21700:

| Tolerance<br>(± %) | Code Letter |
|--------------------|-------------|
| 5                  | J           |
| 10                 | K           |
| 20                 | M           |

(c) Rated Voltage expressed by the following codes:

| Rated Voltage<br>(V) | Code Letter |
|----------------------|-------------|
| 16                   | X           |
| 25                   | Α           |
| 50                   | С           |
| 100                  | E           |
| 200                  | G           |

# 1.4.2 <u>Component Type Variants and Range of Components</u>

The component type variants and range of components applicable to this specification are as follows:

| Variant        | Style | Capacitance                           | Terminal Mate    | erial and Finish                 | Weight     |
|----------------|-------|---------------------------------------|------------------|----------------------------------|------------|
| Number         |       | Range,<br>Tolerance,<br>Rated Voltage | End Terminations | Termination Finish               | Max<br>(g) |
| 01             | 0805  | See Note 1                            | Ag/Pd            | No finish (Note 2)               | 0.1        |
| 03             | 0805  | See Note 1                            | Ag/Pd/Pt         | No finish (Note 2)               | 0.1        |
| 05             | 0805  | See Note 1                            | Ag + Ni barrier  | Sn60, Sn62 or<br>Sn63 solder dip | 0.1        |
| 06             | 0805  | See Note 1                            | Ag + Ni barrier  | Sn/Pb plating<br>(Note 3)        | 0.1        |
| 07<br>(Note 4) | 0805  | See Note 1                            | Ag + Ni barrier  | Sn/Pb plating<br>(Note 3)        | 0.1        |
| 80             | 0805  | See Note 1                            | Ag + Ni barrier  | Au plating (Note 2)              | 0.1        |
| 09<br>(Note 4) | 0805  | See Note 1                            | Ag/Pd            | No finish (Note 2)               | 0.1        |
| 10<br>(Note 4) | 0805  | See Note 1                            | Ag/Pd/Pt         | No finish (Note 2)               | 0.1        |
| 11<br>(Note 4) | 0805  | See Note 1                            | Ag + Ni barrier  | Au plating (Note 2)              | 0.1        |

# **NOTES:**

1. Available rated voltages, capacitance values and tolerances are as follows:

| Rated<br>Voltage U <sub>R</sub> | Capacitance Range C <sub>n</sub> (pF) |        | Tolerance<br>(± %) | Value<br>Series |
|---------------------------------|---------------------------------------|--------|--------------------|-----------------|
| (V)                             | Min                                   | Max    |                    |                 |
| 200                             | 100                                   | 15000  | 5                  | E24             |
|                                 |                                       |        | 10                 | E12             |
|                                 |                                       |        | 20                 | E6              |
| 100                             | 68                                    | 47000  | 5                  | E24             |
|                                 |                                       |        | 10                 | E12             |
|                                 |                                       |        | 20                 | E6              |
| 50                              | 100                                   | 100000 | 5                  | E24             |
|                                 |                                       |        | 10                 | E12             |
|                                 |                                       |        | 20                 | E6              |
| 25                              | 100                                   | 150000 | 5                  | E24             |
|                                 |                                       |        | 10                 | E12             |
|                                 |                                       |        | 20                 | E6              |
| 16                              | 6800                                  | 220000 | 5                  | E24             |
|                                 |                                       |        | 10                 | E12             |
|                                 |                                       |        | 20                 | E6              |

Any capacitance value in the capacitance range may be available on request.

- 2. Variants 01, 03, 08, 09, 10 and 11 are not suitable for solder assembly methods. They shall be assembled using glue or wire bond techniques.
- 3. Sn/Pb plating with minimum 10% Pb.
- 4. Variants 07, 09, 10 and 11 have X7R dielectric; see High and Low Temperatures Electrical Measurements.

#### 1.5 MAXIMUM RATINGS

The maximum ratings shall not be exceeded at any time during use or storage.

Maximum ratings shall only be exceeded during testing to the extent specified in this specification and when stipulated in Test Methods and Procedures of the ESCC Generic Specification.

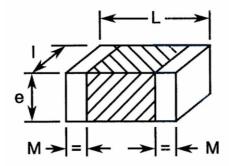

| Characteristics             | Symbols          | Maximum Ratings      | Units | Remarks                            |

#### 1.7 <u>FUNCTIONAL DIAGRAM</u>

# 2 **REQUIREMENTS**

# 2.1 GENERAL

The complete requirements for procurement of the components specified herein are as stated in this specification and the ESCC Generic Specification. Permitted deviations from the Generic Specification, applicable to this specification only, are listed below.

Permitted deviations from the Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirement and do not affect the component's reliability, are listed in the appendices attached to this specification.

# 2.1.1 <u>Deviations from the Generic Specification</u>

# 2.1.1.1 Deviations from Qualification and Periodic Tests (Chart F4)

(a) Solderability: not applicable to Variants 01, 03, 08, 09, 10 and 11.

# 2.2 MARKING

The marking shall be in accordance with the requirements of ESCC Basic Specification No. 21700 and as follows.

The information to be marked on the component or its primary package shall be:

- (a) The ESCC qualified components symbol (for ESCC qualified components only).
- (b) The ESCC Component Number.
- (c) Traceability information.

# 2.3 <u>ELECTRICAL MEASUREMENTS AT ROOM, HIGH AND LOW TEMPERATURES</u>

Electrical measurements shall be performed at room, high and low temperatures.

# 2.3.1 Room Temperature Electrical Measurements

The measurements shall be performed at  $T_{amb} = +22 \pm 3^{\circ}C$ .

#### **NOTES:**

- The measurements shall be performed on a sample of 5 components from each manufacturing lot with 0 failures allowed. In the event of any failure a 100% inspection may be performed.
- 2. In the case of a 100% inspection, a 1% total percent defective is allowed.
- 3. X7R dielectric. Temperature Characteristic for  $V_T = U_R$  is typically -60%. Temperature Characteristic measurements with rated voltage applied are not required.

# 2.4 <u>INTERMEDIATE AND END-POINT ELECTRICAL MEASUREMENTS</u>

Unless otherwise specified, the measurements shall be performed at  $T_{amb} = +22 \pm 3$ °C.

Unless otherwise specified the test methods and test conditions shall be as per the corresponding test defined in Room Temperature Electrical Measurements.

# NOTES:

- 1. As specified in Room Temperature Electrical Measurements.
- 2. Capacitance values recorded during Mounting may be used as initial measurements.
- 3. Test conditions for Insulation Resistance shall be as specified in Steady State Humidity in the ESCC Generic Specification.
- 4. Intermediate measurements are optional at the Manufacturer's discretion.
- 1000 hours is applicable to Periodic Testing for extension of qualification. 2000 hours is applicable to Qualification Testing, and to Periodic Testing for renewal of qualification after lapse.
- 6. As specified in High and Low Temperatures Electrical Measurements.

ISSUE 4

# 2.5 BURN-IN

The requirements for Burn-in are specified in the ESCC Generic Specification. The following conditions shall also apply:

• After Burn-in, the components shall be removed from the chamber and allowed to cool under normal atmospheric conditions for recovery for 24 hours minimum.
