**ISSUE 5** 

#### 1 <u>GENERAL</u>

#### 1.1 <u>SCOPE</u>

This specification details the ratings, physical and electrical characteristics, and test and inspection data for the component type variants and/or the Component Type Variants and Range of Components specified below. It supplements the requirements of, and shall be read in conjunction with, the ESCC Generic Specification listed under Applicable Documents.

#### 1.2 <u>APPLICABLE DOCUMENTS</u>

The following documents form part of this specification and shall be read in conjunction with it:

(a) ESCC Generic Specification No. 3012.

#### 1.3 TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESCC Basic Specification No. 21300 shall apply.

#### 1.4 THE ESCC COMPONENT NUMBER AND COMPONENT TYPE VARIANTS

#### 1.4.1 <u>The ESCC Component Number</u> The ESCC Component Number shall be constituted as follows:

Example: 301200601337MA0015

- Detail Specification Reference: 3012006
- Component Type Variant Number: 01
- Characteristic code: Rated Capacitance (330µF): 337 (as required)
- Characteristic code: Capacitance Tolerance (±20%): M
- Rating code: DC Rated Voltage (10V): A (as required)
- Characteristic code: Maximum Equivalent Series Resistance (15mΩ): 0015

#### 1.4.1.1 Characteristics and Ratings Codes

Characteristics and ratings to be codified as part of the ESCC Component Number shall be as follows:

(a) Rated Capacitance, C<sub>n</sub>, expressed by means of the following codes in accordance with ESCC Basic Specification No. 21700. The unit quantity shall be picofarad (pF).

| Capacitance Value C<br>(pF) | Code |
|-----------------------------|------|
| XX 10 <sup>6</sup>          | XX6  |
| XX 10 <sup>7</sup>          | XX7  |

(b) Capacitance Tolerance expressed by the following codes in accordance with ESCC Basic Specification No. 21700:

| Tolerance<br>(± %) | Code |
|--------------------|------|
| 20                 | М    |

(c) DC Rated Voltage, U<sub>R</sub>, expressed by the following codes:

| DC Rated Voltage U <sub>R</sub><br>(V) | Code |
|--|------|
| 6.3                                    | J    |
| 10                                     | А    |
| 16                                     | С    |
| 20                                     | D    |
| 25                                     | E    |
| 35                                     | V    |

(d) Equivalent Series Resistance maximum value, ESR, expressed by the following codes. The unit quantity shall be milliohm  $(m\Omega)$ :

| Maximum<br>Equivalent Series<br>Resistance<br>ESR (mΩ) | Code |
|--|------|
| XX   | 00XX |

1.4.2 <u>Component Type Variants and Range of Components</u> The Component Type Variants and Range of Components applicable to this specification are as follows:

| Variant<br>Number | Case Code<br>(Style)<br>(Note 1) | Capacitance<br>Range<br>C <sub>n</sub> (µF)<br>(Notes 2, 3) | DC Rated<br>Voltage<br>U <sub>R</sub> (V)<br>(Note 2) | Maximum<br>Equivalent Series<br>Resistance<br>ESR (mΩ)<br>(Note 2) | Weight<br>Max<br>(g) |
|-------------------|----------------------------------|---|---|--|----------------------|
| 01                | E<br>(2917)                      | 22 to 470   | 6.3 to 35   | 12, 15, 20, 25, 50   | 0.7                  |

#### NOTES:

1. See Para. 1.53.

 The following Rated Capacitance (C<sub>n</sub>), DC Rated Voltage (U<sub>R</sub>) and maximum Equivalent Series Resistance values (ESR) are available for Variant 01 (Case Code: E) (numbers indicate maximum ESR in mΩ):

| Capacitance | DC Rated Voltage U <sub>R</sub> |      |      |      |      |      |  |  |  |
|-------------|---------------------------------|------|------|------|------|------|--|--|--|
| Cn          | 6.3V 10V 16V                    |      | 16V  | 20V  | 25V  | 35V  |  |  |  |
| 22µF        |                                 |      |      |      |      | 50mΩ |  |  |  |
| 33µF        |                                 |      |      |      | 50mΩ |      |  |  |  |
| 68µF        |                                 |      |      | 25mΩ |      |      |  |  |  |
| 150µF       |                                 |      | 20mΩ |      |      |      |  |  |  |
| 220µF       |                                 | 15mΩ | 20mΩ |      |      |      |  |  |  |
| 330µF       | 12mΩ                            | 15mΩ |      |      |      |      |  |  |  |
| 470µF       | 12mΩ                            |      |      |      |      |      |  |  |  |

- 3. The following Capacitance Tolerance is available:
  - ±20% (M)

PAGE 7

ISSUE 5

#### 1.5 MAXIMUM RATINGS

The maximum ratings shall not be exceeded at any time during use or storage.

Maximum ratings shall only be exceeded during testing to the extent specified in this specification and when stipulated in Test Methods and Procedures of the ESCC Generic Specification.

| Characteristics             | Symbols          | Symbols Maximum Ratings |    | Remarks                  |
|-----------------------------|------------------|-------------------------|----|--------------------------|
| DC Rated Voltage            | UR               | See Para. 1.4.1.1(d)    | V  | Note 1                   |
| DC Surge Voltage            | Us               | 1.3 x U <sub>R</sub>    | V  | T <sub>amb</sub> ≤ +85°C |
| DC Category Voltage         | Uc               | 0.8 x U <sub>R</sub>    | V  |                          |
| Ripple Current              | Iripple          | See Note 2              | mA | f = 100kHz,<br>Note 3    |
| Operating Temperature Range | T <sub>op</sub>  | -55 to +105             | °C | T <sub>amb</sub>         |
| Rated Temperature           | T <sub>R</sub>   | +85                     | °C |                          |
| Upper Category Temperature  | Tc               | +105                    | °C |                          |
| Storage Temperature Range   | T <sub>stg</sub> | -55 to +105             | °C | Note 4                   |
| Soldering Temperature       | T <sub>sol</sub> | +260                    | °C | Notes 4, 5               |

#### NOTES:

- 1. At  $T_{amb} \le +85^{\circ}$ C. For  $T_{amb} > +85^{\circ}$ C, derate linearly to U<sub>C</sub> at  $T_{amb} = +105^{\circ}$ C.
- 2. Maximum  $I_{ripple}$ , which depends on  $C_n$  and  $U_R$ , shall be as follows at  $T_{amb} \le +45^{\circ}C$  and f = 100kHz:

| Capacitance<br>C <sub>n</sub> (µF) | DC Rated<br>Voltage<br>U <sub>R</sub> (V) | Maximum<br>Ripple Current<br>I <sub>ripple</sub> (A) |
|------------------------------------|---|--|
| 22                                 | 35  | 2.9  |
| 33                                 | 25  | 2.9  |
| 68                                 | 20  | 2.9  |
| 150                                | 16  | 4  |
| 220                                | 16  | 4  |
| 220                                | 10  | 4  |
| 330                                | 10  | 4  |
| 330                                | 6.3                                       | 4  |
| 470                                | 6.3                                       | 4  |

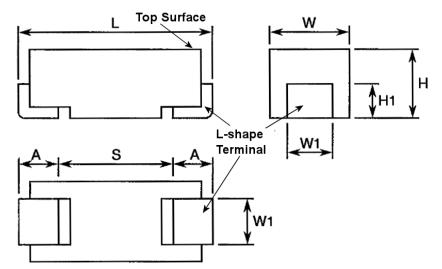

- 3. At  $T_{amb} \le +45^{\circ}$ C. For  $+45^{\circ}$ C  $< T_{amb} \le +85^{\circ}$ C, derate maximum  $I_{ripple}$  linearly to 0.7 $I_{ripple}$  at  $T_{amb} = +85^{\circ}$ C. For  $T_{amb} > +85^{\circ}$ C, derate linearly to 0.47 $I_{ripple}$  at  $T_{amb} = +105^{\circ}$ C.
- 4. These components are classified as Moisture Sensitivity Level 3 in accordance with J-STD-020. Components shall be delivered in moisture barrier bags with a desiccant and moisture indicator card. Components should be stored still contained within the moisture barrier bags in a non-condensating atmospheric environment of  $T_{amb} \le +40^{\circ}C$  and relative humidity RH  $\le 90\%$ .

These components have a floor life of 168 hours at  $T_{amb} \le +30^{\circ}C$  and RH  $\le 60\%$ .

5. Duration 5 seconds maximum for wave soldering and 10 seconds maximum for reflow soldering. The solderable area is the terminal pad and up to 1/3 the height of the L-shape terminal (see Para. 1.6).

#### 1.6 PHYSICAL DIMENSIONS AND TERMINAL IDENTIFICATION

#### NOTES:

1. Terminal identification: The anode terminal shall be indicated by a polarity stripe marked on the top surface of the component. For qualified components, the ESCC qualified components symbol may be used to indicate the anode terminal.

#### 1.7 FUNCTIONAL DIAGRAM

Terminal 1: Anode

Terminal 2: Cathode

#### 1.8 MATERIALS AND FINISHES

1.8.1 <u>Terminal Material and Finish</u>

Terminal material and finish shall be type P17 in accordance with the requirements of ESCC Basic Specification No. 23500.

PAGE 9

**ISSUE 5** 

#### 2 <u>REQUIREMENTS</u>

#### 2.1 <u>GENERAL</u>

The complete requirements for procurement of the components specified herein are as stated in this specification and the ESCC Generic Specification. Permitted deviations from the Generic Specification, applicable to this specification only, are listed below.

Permitted deviations from the Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirement and do not affect the component's reliability, are listed in the appendices attached to this specification.

#### 2.1.1 Deviations from the Generic Specification

#### 2.1.1.1 Deviations from Qualification and Periodic Testing - Chart F4

(a) Para. 8.14, Surge Voltage: Data Points: In addition, Capacitance Change shall be measured on completion of testing.

#### 2.2 <u>MARKING</u>

The marking shall be in accordance with the requirements of ESCC Basic Specification No. 21700. The information to be marked shall be:

- (a) Terminal Identification (see Para. 1.6).
- (b) The ESCC qualified components symbol (for ESCC qualified components only).
- (c) The ESCC Component Number (see Para. 1.4.1).
- (d) Traceability information.
- 2.3 <u>ELECTRICAL MEASUREMENTS AT ROOM, HIGH AND LOW TEMPERATURES</u> Electrical measurements shall be performed at room, high and low temperatures.

#### 2.3.1 <u>Room Temperature Electrical Measurements</u> The measurements shall be performed at $T_{amb} = +22 \pm 3^{\circ}C$ .

#### NOTES:

- 1. Measurements shall be performed on a sample of 5 components from each manufacturing lot and each capacitance value with 0 failures allowed. In the event of any failure a 100% inspection may be performed.
- 2. Whichever is greater.
- 3. 2.5× the limit specified in Para. 2.3.1.
- 4. 1.5× the limit specified in Para. 2.3.1.

### 2.4 INTERMEDIATE AND END-POINT ELECTRICAL MEASUREMENTS

Unless otherwise specified, the measurements shall be performed at  $T_{amb}$  = +22 ±3°C.

Unless otherwise specified the test methods and test conditions shall be as per the corresponding test defined in Para. 2.3.1 Room Temperature Electrical Measurements.

#### NOTES:

- 1. As specified in Para. 2.3.1.
- 2. 1.25× the limit specified in Para. 2.3.1.
- 3. Capacitance measured during the final measurements during Mounting may be used as the initial measurement for other tests. In this case, Capacitance Change shall be referred to this initial measurement.
- 4. 5× the limit specified in Para. 2.3.1.
- 5. As specified in Para. 2.3.2.
- 6. 2× the limit specified in Para. 2.3.1.
- 7. 1.25× the limit specified in Para. 2.3.2.
- 8. Applicable to Qualification Testing, and to Periodic Testing for renewal of qualification after lapse.
- 9. Applicable to Periodic Testing for extension of qualification.
- 10. 1000 hours is applicable to Periodic Testing for extension of qualification. 2000 hours is applicable to Qualification Testing, and to Periodic Testing for renewal of qualification after lapse.
