2. All inputs and outputs not under test shall be open.
3. No more than one output should be shorted at a time, and only for 1 second maximum.
4. Propagation delay measurements shall be performed as a go-no-go test on a 100% basis. Read-and-record measurements shall be performed on an LTPD7 sample basis following the Chart III Burn-in Test.
5. All outputs open and all inputs, except clock, low.

I_{CC} is measured after applying a single pulse of 4.5V to Ground to the clock input.
