The conditions shall be as specified for Burn-in in Para. 2.6.

APPENDIX A
AGREED DEVIATIONS FOR RICA (I)

ITEMS AFFECTED	DESCRIPTION OF DEVIATIONS
Para. 2.1.1, Deviations from the Generic Specification: Qualification and Periodic Tests - Chart F4	The specified period for the Endurance Subgroup shall be 24 months.
Para. 2.1.1.1, Deviations from Screening Tests - Chart F3	(a) Heaters with cover material applied: Where cover material has been applied during the heater lamination process, the deviations specified in Para. 2.1.1.1(a) of this specification are not applicable.
	Serialisation: A 100% serialisation, performed prior to Chart F3 Screening Tests with subsequent Electrical Measurements at Room, High and Low Temperatures performed read and record, is optional at the Manufacturer's discretion.
	Para. 8.2, Rapid Change of Temperature: Mounting: Heaters may be mounted using any suitable method. Data Points: Electrical measurements during and after testing are optional at the Manufacturer's discretion.
	Para. 8.3, Overload: Data Points: Electrical measurements after testing are optional at the Manufacturer's discretion.
	Para. 8.4, Burn-in: Under Test Conditions, amend the duration for Burn-in to be 120 (+48 -0) hours
Para. 2.2 Marking	When marking of the heater body is not possible, the marking may be performed on a Polyimide + PSA label applied to the heater leads.
