### 1.1 SCOPE

This specification details the values, physical and electrical characteristics, test and inspection data for Crystal Units in Glass Cases, based on Type DA (HC-27/U), Frequency Range 2.5 - 300MHz.

It shall be read in conjunction with ESA/SCC Generic Specification No. 3501, the requirements for which are supplemented herein.

### 1.2 TYPE VARIANTS

A list of the type variants of the crystal units specified herein, which are also covered by this specification, is given in "Table 1(a) - Type Variant Summary".

For each type variant, the full electrical and physical characteristics are given in individual Tables 1(a) - "Type Variant Detailed Information" at the end of this specification.

The contents of the individual Tables 1(a) shall be as shown in Table 1(c) and the characteristics therein listed shall relate to the design parameters of the individual crystal units, optimised for the intended application.

The specific characteristics shall be negotiated between the Manufacturer and the Orderer. The Manufacturer shall then apply to the ESA/SCC Secretariat for a type variant number for each individual crystal unit concerned, by sending a finalised Table 1(a) which shall also be copied to the Qualifying Space Agency (QSA).

### 1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the crystal units specified herein, are as scheduled in Table 1(b).

### 1.4 PHYSICAL DIMENSIONS

The physical dimensions of the crystal units specified herein are shown in Figure 2.

### 1.5 FUNCTIONAL DIAGRAM

The functional diagram showing lead identification of the crystal units specified herein is shown in Figure 3.

**NOTES:** See Pages 8 and 9.

**NOTES TO TABLE 1(c)**

1. (a) If  $C_L$  is not specified, Symbol and measurement shall be  $f_r$ .  
(b) If  $C_L$  is specified, Symbol and measurement shall be  $f_L$ .
2. Reference Temperature  $T_0$ 
  - (a) For a crystal unit functioning in a non-controlled temperature environment, the reference temperature is normally  $+25 \pm 2$  °C.
  - (b) For a crystal unit functioning in a controlled temperature environment, the reference temperature shall normally be the mid-point of the temperature range of the controlled environment.
3. Load Capacitance  $C_L$ 
  - (a) When a crystal unit must function at its series resonance frequency,  $C_L$  shall be infinite.
  - (b) When a crystal must function with a load capacitance, the  $C_L$  value shall be specified. The standard values of load capacitance are as follows:
    - Fundamental Frequency Operation: 20pF, 30pF, 50pF and 100pF.
    - Overtone Operation: 8pF, 12pF, 15pF, 20pF and 30pF.

**N.B**

The tolerance on the load capacitance shall be that value which results in a frequency change not exceeding 10% of the frequency tolerance at  $T_0$  or 1% of the nominal load capacitance, whichever is smaller.

4. Rated Drive Level  $P_0$ 

The rated drive level shall be selected from the standard drive levels specified below:

  - Preferred values: 2mW, 1mW, 0.5mW, 0.2mW, 0.1mW, 0.05mW, 0.02mW, 0.01mW, 0.001mW or 0.0001mW at  $\pm 20\%$ .
  - Non-preferred values: 10mW, 5mW and 4mW all at  $\pm 20\%$ .
5. Frequency Adjustment Tolerance
  - (a) When a crystal must function at its series resonance frequency, the standard value of the adjustment tolerance shall be  $\pm 10 \times 10^{-6}$ .
  - (b) When a crystal has to function with a load capacitance, the standard value of the adjustment tolerance shall also be  $\pm 10 \times 10^{-6}$ . However, if the load capacitance is adjustable, it is preferable to specify that the nominal frequency be obtained with a load capacitance value between the minimum and maximum value when the crystal is functioning in its fundamental mode.
6. Resonance Resistance
  - (a) Generally, the maximum value only is specified.
  - (b)  $R_L$  may be calculated by  $R_L = R_r \left( 1 + \frac{C_0}{C_L} \right)^2$
7. Frequency and Resistance Variation with Temperature

These values shall be specified such that they are consistent with the operating temperature range.
8. Frequency and Resistance Variation with Drive Level

These limits and the Drive Level range ( $P_{S1}$  to  $P_{S2}$ ) shall be specified for very special crystals only (i.e. crystals used in very high stability oscillators).

**NOTES TO TABLE 1(c) (Continued)****9. Electrical Values**

The electrical values shall be specified only when required for the correct functioning of the equipment in which the crystal is used.

**10. Motional Inductance  $L_1$** 

Because the inductance value may be restricted by other chosen parameters, the Manufacturer shall propose the value of  $L_1$  in accordance with the Customer's requirements.

**11. 'Q' Factor**

If 'R' and 'L' have been already specified, it will not be necessary to specify the minimum value of the 'Q' factor.

The maximum value of the 'Q' factor is never specified.

**12. Ratio of Unwanted Response Resistance to Resonance Resistance**

The standard minimum value is 2, but it is possible to obtain higher values.

The frequency range within which the minimum value of the ratio is required shall also be specified.

**13. Ageing**

Specify limits under appropriate column and ageing period under "Remarks".

**14. Terminal Lengths**

To be specified if different from Figure 2 dimensions. If dimensions are as per Figure 2 then "Figure 2" to be entered in the Limits column.

**15. Not applicable Items**

For all items where limits are not specified, "Not applicable" shall be entered in the Limits column.

**16. Intended Application**

For definitions of the selected symbol to be added, see ESA/SCC Generic Specification No. 3501, Para. 3.

**2. APPLICABLE DOCUMENTS**

The following documents form part of this specification and shall be read in conjunction with it:-

- (a) ESA/SCC Generic Specification No. 3501 for Quartz Crystal Units.

**3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS**

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply. In addition, the following symbols are used:-

Resonance Frequency	= $f_r$
Load Resonance Frequency	= $f_L$
Reference Temperature	= $T_o$
Resonance Resistance	= $R_r$
Load Resonance Resistance	= $R_L$
Rated Drive Level	= $P_o$

Load Capacitance	= $C_L$
Motional Capacitance	= $C_1$
Motional Inductance	= $L_1$
Response Resistance	= $R_p$
Response Impedance	= $ Z_{pl} $
Insulation Resistance	= $R_i$

**4. REQUIREMENTS****4.1 GENERAL**

The complete requirements for procurement of the crystal units specified herein shall be as stated in this specification and ESA/SCC Generic Specification No. 3501 for Quartz Crystal Units. Deviations from the Generic Specification applicable to this specification only, are detailed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

**4.2 DEVIATIONS FROM GENERIC SPECIFICATION****4.2.1 Deviations from Special In-process Controls**

None.

**4.2.2 Deviations from Final Production Tests (Chart II)**

None.

**4.2.3 Deviations from Burn-in Tests (Chart III)**

None.

**4.2.4 Deviations from Qualification Tests (Chart IV)**

None.

**4.2.5 Deviations from Lot Acceptance Tests (Chart V)**

None.

4.3 MECHANICAL REQUIREMENTS

4.3.1 Dimension Check

The dimensions of the crystal units specified herein shall be checked. They shall conform to those shown in Figure 2.

4.3.2 Weight

The maximum weight of the crystal units specified herein shall be 3.0 grammes.

4.3.3 Robustness of Terminations

The requirements for robustness of termination testing are specified in Section 9 of ESA/SCC Generic Specification No. 3501.

4.4 MATERIALS AND FINISHES

The materials and finishes shall be as specified herein. Where a definite material is not specified, a material which will enable the crystal units specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 Case

The case shall be hermetically sealed and shall have a sintered-glass base and a glass cap.

4.4.2 Lead Material and Finish

The lead material shall be Type 'D' with Type '3 or 4' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500.

4.5 MARKING

4.5.1 General

The marking of all components delivered to this specification shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700 and the following paragraphs. When the component is too small to accommodate all of the marking specified, as much as space permits shall be marked and the marking information, in full, shall accompany the component in its primary package.

The information to be marked and the order of precedence, shall be as follows:-

- (a) The SCC Component Number.
- (b) Characteristics.
- (c) Traceability Information.

4.5.2 The SCC Component Number

Each component shall bear the SCC Component Number, which shall be constituted and marked as follows:-

#### 4.5.3 Characteristics

The resonance frequency of the crystal units shall be clearly specified in MHz. Where necessary, it shall be specified to 6 decimal places.

#### 4.5.4 Traceability Information

Each component shall be marked in respect of traceability information in accordance with the requirements of ESA/SCC Basic Specification No. 21700.

#### 4.5.5 Manufacturer's Name, Symbol or Code

The Manufacturer's marking shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700.

### 4.6 ELECTRICAL MEASUREMENTS

#### 4.6.1 Electrical Measurements at Reference Temperature

The parameters to be measured in respect of electrical characteristics are scheduled in Table 2. The measurements shall be performed at the temperatures specified in the individual Tables 1(a), Item 2.

#### 4.6.2 Electrical Measurements at High and Low Temperatures

The parameters to be measured at high and low temperatures are scheduled in Table 3. These measurements shall only be performed if values are specified in Table 1(a) Items 8 and/or 9.

#### 4.6.3 Circuits for Electrical Measurements (Figure 4)

Not applicable.

### 4.7 BURN-IN TESTS

#### 4.7.1 Parameter Drift Values

The parameter drift values applicable to burn-in are specified in Table 4 of this specification. Unless otherwise stated, measurements shall be performed at  $T_{amb} = T_0 \pm 2$  °C. The parameter drift values (Delta) applicable to the scheduled parameters shall not be exceeded. In addition to these drift value requirements for a given parameter, the appropriate limit value specified in Table 2 shall not be exceeded.

#### 4.7.2 Conditions for Burn-in

The requirements for burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 3501. The conditions for burn-in shall be as specified in Table 5 of this specification.

#### 4.7.3 Electrical Circuits for Burn-in (Figure 5)

Not applicable.

4.8 ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC SPECIFICATION NO. 3501)

4.8.1 Measurements and Inspections on Completion of Environmental Tests

The parameters to be measured and inspections to be performed on completion of environmental tests are scheduled in Table 6. Unless otherwise stated, the measurements shall be performed at  $T_{amb} = T_0 \pm 2 \text{ }^\circ\text{C}$ .

4.8.2 Measurements and Inspections at Intermediate Points and on Completion of Endurance Tests

The parameters to be measured and inspections to be performed at intermediate points and on completion of endurance tests are scheduled in Table 6. Unless otherwise stated, the measurements shall be performed at  $T_{amb} = T_0 \pm 2 \text{ }^\circ\text{C}$ .

4.8.3 Conditions for Operating Life Test (Part of Endurance Testing)

The requirements for the operating life test are specified in Section 9 of ESA/SCC Generic Specification No. 3501. The test shall be performed as a high temperature storage test and the temperature to be applied shall be the maximum operating temperature specified in the individual Tables 1(a) given in this specification.
