ISSUE 1

1. GENERAL

1.1 SCOPE

This specification details the ratings, physical and electrical characteristics, test and inspection data for a silicon, monolithic, CMOS Silicon Gate, Static, 64K (65536 x 1 BIT) Asynchronous Random Access Memory with 3-State Outputs, based on Type HM65687. It shall be read in conjunction with ESA/SCC Generic Specification No. 9000, the requirements of which are supplemented herein.

1.2 COMPONENT TYPE VARIANTS

Variants of the basic type integrated circuits specified herein, which are also covered by this specification, are given in Table 1(a).

1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the integrated circuits specified herein, are as scheduled in Table 1(b).

1.4 PARAMETER DERATING INFORMATION (FIGURE 1)

Not applicable.

1.5 PHYSICAL DIMENSIONS

As per Figure 2.

1.6 PIN ASSIGNMENT

As per Figure 3(a).

1.7 TRUTH TABLE

As per Figure 3(b).

1.8 CIRCUIT SCHEMATIC

As per Figure 3(c).

1.9 FUNCTIONAL DIAGRAM

As per Figure 3(d).

1.10 HANDLING PRECAUTIONS

These devices are susceptible to damage by electrostatic discharge. Therefore, suitable precautions shall be employed for protection during all phases of manufacture, testing, packaging, shipment and any handling.

These components are categorised as Class 1 with a Minimum Critical Path Failure Voltage of 1 000 Volts.

1.11 INPUT PROTECTION NETWORK

Double transistor protection shall be incorporated into each input as shown in Figure 3(e).

NOTES

- 1. Device is functional from +4.5V to +5.5V with reference to Ground.
- 2. V_{DD} + 0.3V should not exceed +7.0V.
- 3. The maximum output current of any single output.
- 4. Duration 10 seconds maximum at a distance of not less than 1.5mm from the device body and the same lead shall not be resoldered until 3 minutes have elapsed.
- 5. Duration 5 seconds maximum and the same terminal shall not be resoldered until 3 minutes have elapsed.

FIGURE 2 - PHYSICAL DIMENSIONS (CONTINUED)

NOTES TO FIGURES 2(a) TO 2(c) INCLUSIVE

- 1. Index area: a notch, letter or dot shall be located adjacent to Pin 1 and shall be within the shaded area shown. For chip carrier packages the index shall be as defined in Figure 2(c).
- Not applicable.
- 3. The dimension shall be measured from the seating plane to the base plane.
- 4. The dimension allows for off-centre lids, meniscus and glass overrun.
- 5. The true position pin or terminal spacing is 1.27mm between centrelines. Each pin or terminal centreline shall be located within 0.13mm of its true longitudinal position relative to Pin 1 and the highest pin number.
- 6. The true position pin spacing is 2.54mm between centrelines. Each pin centreline shall be located within 0.25mm of its true longitudinal position relative to Pin 1 and the highest pin number.
- 7. Applies to all 4 corners.
- 8. All leads or terminals.
- 9. 20 spaces for dual-in-line packages.
 - 18 spaces for chip carrier packages.
- 10. 3 non-index corners 6 dimensions.
- 11. Index corner only 2 dimensions.

- 2. Address valid prior to or coincident with $\overline{\text{CS}}$ transition low.

PAGE 14

ISSUE 1

WRITE CYCLE 1 (W CONTROLLED)

NOTES

1. The internal write time of the memory is defined by the overlap of \overline{CS} Low and \overline{W} Low. Both signals must be Low to initiate a write and either signal can terminate a write by going High. The data input setup and hold timing should be referenced to the rising edge of the signal that terminates the write.

WRITE CYCLE 2 (CS CONTROLLED)

NOTES

1. The internal write time of the memory is defined by the overlap of \overline{CS} Low and \overline{W} Low. Both signals must be Low to initiate a write and either signal can terminate a write by going High. The data input setup and hold timing should be referenced to the rising edge of the signal that terminates the write.

2. <u>APPLICABLE DOCUMENTS</u>

The following documents form part of this specification and shall be read in conjunction with it:-

- (a) ESA/SCC Generic Specification No. 9000 for Integrated Circuits.
- (b) MIL-STD-883, Test Methods and Procedures for Micro-electronics.

3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply. In addition, the following abbreviations are used:

V_{IC} = Input Clamp Voltage.

I_{OZL} = Output Leakage Current Third State (Low Level Applied)

I_{OZH} = Output Leakage Current Third State (High Level Applied)

C_{IN} = Input Capacitance.

C_{OUT} = Output Capacitance

TAVAV = Cycle Time.

TAVQV = Address Access Time

TELQV = CS Access Time.

TELQX = CS Low Output Enable Time.

TELEH = CS Low to CS High Time.

TEHQZ = CS High Output Disable Time.

TAVQX = Output Change from Address Change.

TELWH = CS Low to End of Write.

TAVWL = Address Set-up Time.

TWLWH = W Low Pulse Width.

TWHAX = Address Hold from Write End.

TWLQZ = W Low Output Disable Time.

TDVWH = Data Set-up Time.

TWHDX = Data Hold Time.

TWHQX = W High Output Enable Time

TAVWH = Address Valid to Write End.

t_r = Recovery Time from Data Retention.

4. **REQUIREMENTS**

4.1 GENERAL

The complete requirements for procurement of the integrated circuits specified herein are stated in this specification and ESA/SCC Generic Specification No. 9000 for Integrated Circuits. Deviations from the Generic Specification, applicable to this specification only, are listed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

PAGE 17

ISSUE 1

4.2 <u>DEVIATIONS FROM GENERIC SPECIFIC</u>ATION

4.2.1 Deviations from Special In-process Controls

- (a) Para. 5.2.2, Total Dose Irradiation Testing: Shall be performed during qualification and extension of qualification.
- (b) Para. 5.2.2, Total Dose Irradiation Testing: Shall be performed during procurement on a lot acceptance basis at the total dose irradiation level specified in the Purchase Order.

4.2.2 <u>Deviations from Final Production Tests (Chart II)</u>

(a) Para. 9.9.3, Electrical Measurements may be performed at high temperature.

4.2.3 Deviations from Burn-in Tests (Chart III)

(a) Para. 7.1.1(a), "High Temperature Reverse Bias" tests and subsequent electrical measurements related to this test shall be omitted.

4.2.4 <u>Deviations from Qualification Tests (Chart IV)</u>

(a) The electrical measurements referenced in Para. 9.9.4 shall be performed as stated in Table 2 of this specification.

4.2.5 <u>Deviations from Lot Acceptance Tests (Chart V)</u>

(a) The electrical measurements referenced in Para. 9.9.4 shall be performed as stated in Table 2 of this specification.

4.3 MECHANICAL REQUIREMENTS

4.3.1 Dimension Check

The dimensions of the integrated circuits specified herein shall be checked. They shall conform to those shown in Figure 2.

4.3.2 Weight

The maximum weight of the integrated circuits specified herein shall be 3.0 grammes for Variants 1, 4, 7 and 10, 4.0 grammes for Variants 2, 5, 8 and 11 and 0.5 grammes for Variants 3, 6, 9 and 12.

4.4 MATERIALS AND FINISHES

The materials shall be as specified herein. Where a definite material is not specified, a material which will enable the integrated circuits specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

4.4.1 <u>Case</u>

The case shall be hermetically sealed and have a ceramic body and the lids shall be welded, brazed, preform-soldered or glass-frit-sealed.

4.4.2 Lead Material and Finish

For dual-in-line packages, the material shall be Type 'D' with Type '7' finish or Type 'G' with Type '3' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500. For chip carrier packages the finish shall be Type '7' in accordance with the requirements of ESA/SCC Basic Specification No. 23500. (See Table 1(a) for Type Variants).

Rev. 'A'

PAGE 18

ISSUE 1

4.5 MARKING

4.5.1 General

The marking of all components delivered to this specification shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700. Each component shall be marked in respect of:-

- (a) Lead Identification.
- (b) The SCC Component Number.
- (c) Traceability Information.

4.5.2 Lead Identification

For dual-in-line packages, an index shall be located at the top of the package in the position defined in Note 1 to Figure 2 or, alternatively, a tab may be used to identify Pin No. 1. The pin numbering must be read with the index or tab on the left-hand side. For chip carrier packages, the index shall be as defined by Figure 2(c).

4.5.3 The SCC Component Number

Each component shall bear the SCC Component Number which shall be constituted and marked as follows:

	<u>930102601BF</u>
Detail Specification Number	
Type Variant (see Table 1(a))	
Testing Level (B or C, as applicable)	
Total Dose Irradiation Level (if applicable) -	

The Total Dose Irradiation Level designation shall be added for those devices for which a sample has been successfully tested to the level in question. For these devices, a code letter shall be added in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

4.5.4 Traceability Information

Each component shall be marked in respect of traceability information in accordance with the requirements of ESA/SCC Basic Specification No. 21700.

4.6 ELECTRICAL MEASUREMENTS

4.6.1 <u>Electrical Measurements at Room Temperature</u>

The parameters to be measured in respect of electrical characteristics are scheduled in Table 2. Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.6.2 Electrical Measurements at High and Low Temperatures

The parameters to be measured at high and low temperatures are scheduled in Table 3. The measurements shall be performed at T_{amb} = +125(+0-5) °C and -55(+5-0) °C respectively.

4.6.3 Circuits for Electrical Measurements

Circuits and test sequences for use in performing electrical measurements listed in Tables 2 and 3 of this specification are shown in Figure 4.

PAGE 19

ISSUE 1

4.7 BURN-IN TESTS

4.7.1 Parameter Drift Values

The parameter drift values applicable to Power Burn-in are specified in Table 4 of this specification. Unless otherwise stated, measurements shall be performed at $T_{amb} = +22\pm3$ °C. The parameter drift values (Δ), applicable to the parameters scheduled, shall not be exceeded. In addition to these drift value requirements, the appropriate limit value specified for a given parameter in Table 2 shall not be exceeded.

4.7.2 Conditions for Power Burn-in

The requirements for Power Burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 9000. The conditions for Power Burn-in shall be as specified in Table 5 of this specification.

4.7.3 <u>Electrical Circuits for Power Burn-in</u>

Circuits for use in performing the Power Burn-in tests are shown in Figure 5 of this specification.

TABLE 2 - ELECTRICAL MEASUREMENTS AT ROOM TEMPERATURE (CONTINUED)

NOTES

1. Functional test go-no-go with the following test sequences:-

FUNCTIONAL TEST 1

Pattern	Timing	V_{DD}	V_{SS}	V_{IL}	V_{iH}	loL	Юн	V _{OUT} (COMP)
MARCH, COMARCH		4.5V and 5.5V	0V	0V	3.0V	0mA	0mA	1.5V
CHECKERBOARD		4.5V and 5.5V	0V	0V	3.0V	0mA	0mA	1.5V

FUNCTIONAL TEST 2

Pattern	Timing	V_{DD}	V_{SS}	V _{IL} CK's	V _{IH} CK's	V _{IL} DATA	V _{IH} DATA	V _{IL} ADD	V _{IH} ADD	l _{OL}	l _{OH}	V _{OUT} (COMP)
MARCH	300ns	6.5V	٥V	0V	5.5V	0V	5.5V	VO	5.5V	0mA	0mA	1.5V
MARCH	300ns	4.5V	0V	0V	3.0V	٥V	3.0V	0V	3.0V	0mA	0mA	1.5V
MARCH	2350ns	5.5V	0V	٥V	2.2V	0V	2.2V	0V	5.5 V	0mA	0mA	1.5V
MARCH	2350ns	5.5V	0V	0V	5.5V	0V	5.5V	0V	2.2V	0mA	0mA	1.5V
MARCH	2350ns	4.5V	0V	0.8V	3.0V	0.8V	3.0V	0V	2.2V	0mA	0mA	1.5V
MARCH	2350ns	4.5V	٥V	0V	4.5V	٥V	4.5V	V8.0	3.0V	0mA	0mA	1.5V

FUNCTIONAL TEST 3

Pattern	Timing	V_{DD}	V_{SS}	V_{IL}	V_{IH}	lOL	ЮН	V _{OUT} (COMP)
MARCH	2350ns	5.5V	0V	0V	3.0V	4.0mA	-1.0mA	2.0V
MARCH	2350ns	4.5V	0V	0V	3.0V	4.0mA	-1.0mA	2.0V
CHIP DESELECT	300ns	4.5V	0V	0V	3.0V	0.5mA	-0.5mA	1.5V
LONG CHIP SELECT	3000ns	4.5V	0V	0V	3.0V	0.5mA	-0.5mA	1.5V

- 2. Select Address Inputs to produce low level output at the pin under test in accordance with Figure 3(b).
- 3. Select Address Inputs to produce high level output at the pin under test in accordance with Figure 3(b).
- 4. Measurement is performed with the memory loaded with a background of zeros and then with a background of ones, for all inputs high and then low. Only worst case is recorded.
- 5. Data Retention Procedure:-
 - (a) Write memory with Checkerboard pattern with Timing = 300ns at the conditions given.
 - (b) Power Down to $V_{DD} = 1.6 \pm 0V$ for 250ms. (This is a test condition only. Memory retention cannot be guaranteed if V_{DD} is reduced below 2.0V).
 - (c) Restore to original conditions given, read Memory and compare with original pattern.
 - (d) Repeat the procedure with Checkerboard pattern with timing = 300ns at the conditions given.
 - (e) For Variants 04, 05, 06, 10, 11 and 12: $t_r = 45$ ns, for Variants 01, 02, 03, 07, 08 and 09: $t_r = 55$ ns.

4.8 <u>ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC SPECIFICATION No. 9000)</u>

4.8.1 Electrical Measurements on Completion of Environmental Tests

The parameters to be measured on completion of environmental tests are scheduled in Table 2. Unless otherwise stated, the measurements shall be performed at T_{amb} = +22 ±3 °C.

4.8.2 Electrical Measurements at Intermediate Points during Endurance Tests

The parameters to be measured at intermediate points during endurance testing are as scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at T_{amb} = +22 ±3 °C.

4.8.3 Electrical Measurements on Completion of Endurance Tests

The parameters to be measured on completion of endurance testing are as scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at $T_{amb} = +22 \pm 3$ °C.

4.8.4 Conditions for Operating Life Tests

The requirements for operating life testing are specified in Section 9 of ESA/SCC Generic Specification No. 9000. The conditions for operating life testing shall be as specified in Table 5 of this specification.

4.8.5 Electrical Circuits for Operating Life Tests

Circuits for use in performing the operating life tests are shown in Figure 5 of this specification.

4.8.6 Conditions for High Temperature Storage Test

The requirements for the high temperature storage test are specified in ESA/SCC Generic Specification No. 9000. The temperature to be applied shall be the maximum storage temperature specified in Table 1(b) of this specification.

4.9 TOTAL DOSE IRRADIATION TESTING

4.9.1 Application

If specified in Para. 4.2.1 of this specification, total dose irradiation testing shall be performed in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

4.9.2 Bias Conditions

Continuous bias shall be applied during irradiation testing as shown in Figure 6 of this specification.

4.9.3 Electrical Measurements

The parameters to be measured prior to irradiation exposure are scheduled in Table 2 of this specification. Only devices which meet the requirements of Table 2 shall be included in the test sample.

The parameters to be measured during and on completion of irradiation testing are scheduled in Table 7 of this specification.

AGREED DEVIATIONS FOR MATRA-MHS (F)

The following test patterns may be used:-

ICCACT Pattern

(a) Write loop pattern between N min. and N max.

WALKCOL Pattern

- (a) Write a column of ones on a background of zeros.
- (b) Read the column and background, step the column and repeat the read.
- (c) Continue until all columns have been used.
- (d) Repeat with data complement.
- (e) 4YN + 2Y + 2 cycles.

CHIP DESELECT Pattern

- (a) Write 0 background CS at VIL.
- (b) Write 1 background CS at VIL.
- (c) Read 1 background <u>CS</u> at VIL.
- (d) Write 0 background CS at VIH.
- (e) Read 1 background CS at VIL.

LONG CHIP SELECT Pattern

Checkerboard pattern with timing unspecified.
