### 1. GENERAL

#### 1.1 <u>SCOPE</u>

This specification details the ratings, physical, geometrical, electrical and electro-optical characteristics, test and inspection data for a silicon Photosensitive Area Array CCD Image Sensor, 286 Lines × 382 Pixels, based on Type TH7863D. It shall be read in conjunction with ESA/SCC Generic Specification No. 9020, the requirements of which are supplemented herein.

## 1.2 <u>COMPONENT TYPE VARIANTS</u>

A list of the type variants of the basic area array CCD image sensor specified herein, which are also covered by this specification, are given in "Table 1(a) - Type Variant Summary".

For each type variant, the full electro-optical, electrical and geometrical characteristics are given in individual "Tables 1(a) - Type Variant Detailed Information" at the end of this specification.

The contents of the individual Tables 1(a) shall be as shown in Table 1(c).

The specific characteristics shall be negotiated between the Manufacturer and the Orderer. The Manufacturer shall then apply to the ESA/SCC Secretariat for a type variant number for each individual basic area array CCD image sensor concerned, by sending a finalised Table 1(a) which shall also be copied to the Qualifying Space Agency (QSA).

For information concerning Variant 01, see ESA/SCC Generic Specification No. 9020, Para. 4.1.1.

#### 1.3 MAXIMUM RATINGS

The maximum ratings, which shall not be exceeded at any time during use or storage, applicable to the components specified herein, are as scheduled in Table 1(b).

## 1.4 PARAMETER DERATING INFORMATION (FIGURE 1)

Not applicable.

## 1.5 PHYSICAL DIMENSIONS AND GEOMETRICAL CHARACTERISTICS

The physical dimensions and geometrical characteristics of the components specified herein are shown in Figures 2(a) and 2(b).

#### 1.6 PIN ASSIGNMENT

As per Figure 3(a).

#### 1.7 TIMING DIAGRAMS

As per Figure 3(b).

#### 1.8 FUNCTIONAL DIAGRAM

As per Figure 3(c).

#### 1.9 HANDLING PRECAUTIONS

The component is susceptible to damage by electro-static discharge. Therefore, suitable precautions shall be employed for protection during all phases of manufacture, testing, packaging, shipment and any handling.

These components are categorised as Class 1 with a Minimum Critical Path Failure Voltage of 400 Volts.

#### 1.10 INPUT PROTECTION NETWORKS

Protection networks shall be incorporated into each input as shown in Figure 3(d).

PAGE 6 ISSUE 1

## TABLE 1(a) - TYPE VARIANT SUMMARY

VARIANT	REFERENCE TEMPERATURE (T _{ref} °C)	OPERATING TEMPERATURE RANGE (T _{op} °C)	TIMING DIAGRAM (FIGURE 3(b)) (TD)	SPECTRAL RANGE FOR WINDOW OPTICAL COATING WOC (nm)
01	+25±3	-20 to +85	TD1	N/A
02	+35±3	~20 to +85	TD2	450 to 900

#### **NOTES**

1. Full electrical and electro-optical characteristics are given in the individual Tables 1(a) at the end of this specification.

## **TABLE 1(b) - MAXIMUM RATINGS**

No.	CHARACTERISTICS	SYMBOL	MAXIMUM RATINGS	UNITS	REMARKS
1	Range of applied voltages	~	-0.3 to +19	V	Note 1
2	Range of applied voltages	~	-0.3 to +16	V	Note 2
3	Range of applied voltages	~	-5.0 to 0	٧	Note 3
4	Input Current	I _{IN}	200	mA	~
5	Device Dissipation (Continuous)	P _D	Note 4	mW	
6	Operating Temperature Range	T _{op}	Note 5	°C	T _{amb} Note 6
7	Storage Temperature Range	T _{stg}	-55 to +150	°C	**************************************
8	Soldering Temperature	T _{sol}	+260	°C	Note 7

#### NOTES

- 1. On pins 5, 15, 18 with respect to pins 1, 10.
- 2. On pins 2, 3, 4, 6, 7, 8, 9, 11, 12, 13, 14, 19, 20 with respect to pins 1, 10.
- 3. On pins 1, 10, 17.
- 4. The maximum device dissipation is determined by  $19V \times I_{DD(T_{op})}$  max. (mA) (see individual Tables 1(a)).
- 5. See Table 1(a).
- 6. Shall not exceed the Storage Temperature Range.
- 7. Duration 10 seconds maximum at a distance of not less than 3.0mm from the package and the same lead shall not be resoldered until 3.0 minutes have elapsed.

## FIGURE 1 - PARAMETER DERATING INFORMATION

Not applicable.

ISSUE -

## TABLE 1(c) - FORMAT FOR INDIVIDUAL TABLES 1(a) (CONTINUED)

#### **NOTES**

- 1. The reflectance for each side of the window shall be specified inside the spectral range for optical coating.
- 2. The timing diagram TD1 or TD2, as specified in Table 1(a), shall be used for all measurements.
- I_{DD1} measurement shall be static, I_{DD2} measurement shall be dynamic, I_{DD1}(T_{op}) measurement shall be static and all shall be specified in Table 1(a).
- 4. The values of R and C used for output impedance measurement shall be defined in Table 1(a).
- 5. The measurement is based on uniform illumination ESA/SCC Basic Specification No. 25000, Para. 6.12.2(a).
- VDS1 is measured on the first lines or on the whole area if the integration time induces a negligible slope effect.

VDS2 is measured on the last lines.

- 7. The slope effect is removed.
- 8. The responsivity is measured under uniform illumination with BG38 optical filter.
- 9. Optical bands used for PRNU calculation shall be defined in Table 1(a).
- 10. The optical bands shall be specified in terms of centre wavelength and bandwidth at 50% of transmission peak.
- 11. The measurement is made under uniform illumination with a BG38 optical filter. The output signal range used for linearity error calculation shall be defined in Table 1(a).
- 12. The measurement is based on two successive acquisitions of the same row.
- 13. For output signal waveform measurements, the error bands for reference and signal levels are defined by  $\Delta U_{Ref}$  and  $\Delta U_{Signal}$ . Settling times can be referenced either to  $\phi R$  or  $\phi L2$  edges (to be specified in Table 1(a)).
- 14. Boonton Bridge. Load voltage is typically DC = 10V AC = 50mV, 1.0MHz

This parameter is measured by sampling on 3 devices per wafer lot but not on deliverable items.

15. Standard capacitance bridge (1.0kHz).

This parameter is measured by sampling on 3 devices per wafer lot but not on deliverable items.

16. The CVF is measured by sampling on 5 devices per wafer lot, but not on deliverable devices.

#### N.B.

BG38 Optical Filter = Filter BP492/399 of DIN3140, thickness 2.0mm.

- 1. Window.
- 2. Photosensitive area.
- 3. First pixel of first line (X, Y, Z coordinates).
- 4. Index (notch or dot).
- 5. Measured by sampling during Material Incoming Inspection.
- 6. Optical distance between external face of window and photosensitive area.
- 7. I, II, III and IV = Aluminium edges.
- 8. x, o', y = Die referential.
- 9. X, O, Y = Case referential.
- 10.  $\theta$  = Site angle (skew).
- 11. Measured on a 100% basis.
- 12. Measured by sampling on 5 devices per assembly lot.
- 13. Measured with aluminium edges as references.
- 14. The first useful pixel (1,1) is located at a distance:
  - X+(23µm) from aluminium edge I.
  - Y-⅔(23μm) from aluminium edge II.
- 15. The pixels are square and the size of any pixel is equal to  $23\mu m \times 23\mu m$ .

### 2. APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:-

- (a) ESA/SCC Generic Specification No. 9020 for Charge Coupled Devices, Silicon Photosensitive.
- (b) DIN3140, "MAβ-und Toleranzangaben für Optikeinzelteile; oberflächenbeschichtungen" (Inscription of dimensions and tolerances for optical components; indication for coatings).

## 3. TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESA/SCC Basic Specification No. 21300 shall apply.

#### 4. REQUIREMENTS

#### 4.1 GENERAL

The complete requirements for procurement of the components specified herein are stated in this specification and ESA/SCC Generic Specification No. 9020 for Charge Coupled Devices. Deviations from the Generic Specification, applicable to this specification only, are listed in Para. 4.2.

Deviations from the applicable Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESA/SCC requirements and do not affect the components' reliability, are listed in the appendices attached to this specification.

#### 4.2 <u>DEVIATIONS FROM GENERIC SPECIFICATION</u>

#### 4.2.1 <u>Deviations from Special In-process Controls</u>

- (a) Para. 5.2.2, Total Dose Irradiation Testing: Shall be performed during qualification and maintenance of qualification.
- (b) Para. 5.2.2, Total Dose Irradiation Testing: If specified in a Purchase Order, shall be performed during procurement on a lot acceptance basis at the total dose irradiation level specified in the Purchase Order.
- (c) C $\phi$ Po, C $\phi$ Mo, C $\phi$ Lo, C $\phi$ P, C $\phi$ M, C $\phi$ L and C $\phi$ R are measured by sampling 3 devices per wafer lot, but not on deliverable devices.
- (d) CVF is measured by sampling 5 devices per wafer lot, but not on deliverable devices.

### 4.2.2 <u>Deviations from Final Production Tests (Chart II)</u>

- (a) Para. 9.8, the pressure during seal test shall not exceed 3kg/cm².
- (b) Para. 9.8.1, Leak Rate: 5 × 10 -7 atm/cm³/sec.

### 4.2.3 <u>Deviations from Burn-in Tests (Chart III)</u>

- (a) Para. 7.1.1(a), "High Temperature Reverse Bias (H.T.R.B.)" test and subsequent electrical measurements related to this test shall not be performed.
- (b) Para. 9.8, the pressure during seal test shall not exceed 3kg/cm².
- (c) Para. 9.8.1, Leak Rate: 5×10-7 atm/cm³/sec.

PAGE 23

ISSUE -

#### 4.2.4 Deviations from Qualification Tests (Chart IV)

- (a) Para. 9.8, the pressure during seal test shall not exceed 3kg/cm².
- (b) Para. 9.8.1, Leak Rate: 5 × 10 7 atm/cm³/sec.

#### 4.2.5 Deviations from Lot Acceptance Tests (Chart V)

- (a) Para. 9.8, the pressure during seal test shall not exceed 3kg/cm².
- (b) Para. 9.8.1, Leak Rate: 5×10-7 atm/cm³/sec.

## 4.3 <u>MECHANICAL REQUIREMENTS</u>

#### 4.3.1 Dimension Check

The dimensions of the components specified herein shall be checked. They shall conform to those shown in Figure 2(a).

#### 4.3.2 Geometrical Characteristics

The geometrical characteristics of the components specified herein shall be checked. They shall conform to those shown in Figure 2(b).

#### 4.3.3 <u>Weight</u>

The maximum weight of the components specified herein shall be 5.0 grammes.

#### 4.3.4 Terminal Strength

The requirements for terminal strength testing are specified in Section 9 of ESA/SCC Generic Specification No. 9020. The test conditions shall be as follows:

Applied Force:  $1.0 \pm 0.1$  Newtons, 3 bends at  $45(+5-0)^{\circ}$ .

#### 4.4 MATERIALS AND FINISHES

The materials and finishes shall be as specified herein. Where a definite material is not specified, a material which will enable the components specified herein to meet the performance requirements of this specification shall be used. Acceptance or approval of any constituent material does not guarantee acceptance of the finished product.

#### 4.4.1 Case

The case shall be hermetically sealed and have a ceramic body and glass window. The flatness of the underside of package shall be better than 0.01mm/cm, measured between edges, across the complete surface.

#### 4.4.2 Lead Material and Finish

For lead material shall be Type 'D' with Type '7' finish in accordance with the requirements of ESA/SCC Basic Specification No. 23500.

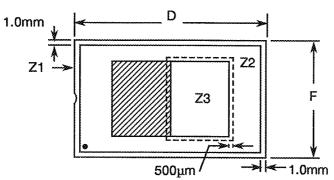

#### 4.4.3 Window

Window material shall be ZKN7 glass. The optical quality of the window including coating, if required for both sides, shall be better than as defined in DIN3140.

PAGE 24

ISSUE

- Surface Defects:

Z1 (Peripheral Zone)

Z2 (Zone between Z1 and Z3)

Z3 (Image Zone + Surround)

: No specification.

0 defect larger than 10 000µm².

0 defect longer than 25µm.

0 scratch wider than 10um.

- Inclusions:

Z3 (Image Zone + Surround)

0 inclusion larger than 25μm.

- Chips and Cracks

: No chips or cracks crossing Z1 and coming into Z2.

- Window form error before mounting

Surface flatness shall be better than 6 fringes measured by interferometry at a wavelength

 $\lambda \approx 633$ nm.

Parallelism

 $\pm 10 \mu m$  max.

## 4.5 MARKING

## 4.5.1 General

The marking of all components delivered to this specification shall be in accordance with the requirements of ESA/SCC Basic Specification No. 21700, and the following paragraphs. When the component is too small to accommodate all of the marking specified, as much as space permits shall be marked and the marking information, in full, shall accompany the component in its primary package.

The information to be marked and the order of precedence, shall be as follows:-

- (a) Lead Identification.
- (b) The SCC Component Number.
- (c) Traceability Information.

### 4.5.2 Lead Identification

An index shall be located at the top of the package in the position defined in Note 1 to Figure 2(a). The pin numbering must be read with the index on the left-hand side.

#### 4.5.3 The SCC Component Number

Each component shall bear the SCC Component Number which shall be constituted and marked as follows:

961000301BE

Detail Specification Number	
Type Variant (see Table 1(a))	
Testing Level (B or C, as applicable)	
Total Dose Irradiation Level (if applicable)	

PAGE 25

ISSUE 1

The Total Dose Irradiation Level designation shall be added for those devices for which a sample has been successfully tested to the level in question. For these devices, a code letter shall be added in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

#### 4.5.4 Traceability Information

Each component shall be marked in respect of traceability information in accordance with the requirements of ESA/SCC Basic Specification No. 21700.

## 4.6 ELECTRICAL AND ELECTRO-OPTICAL MEASUREMENTS

## 4.6.1 Electrical and Electro-optical Measurements at Reference Temperature

The parameters to be measured in respect of electrical and electro-optical characteristics are scheduled in Table 2. Unless otherwise specified, the measurements shall be performed at  $T_{ref} \pm 3$  °C.

## 4.6.2 <u>Electrical and Electro-optical Measurements at High and Low Temperatures</u>

The parameters to be measured at high and low temperatures are scheduled in Table 3. Unless otherwise specified, the measurements shall be performed at -20(+5-0) and +85(+0-5) °C respectively.

#### 4.6.3 Circuits for Electrical and Electro-optical Measurements

Circuits for use in performing electrical and electro-optical measurements listed in Tables 2 and 3 of this specification are shown in Figure 4.

#### 4.7 BURN-IN TESTS

#### 4.7.1 Parameter Drift Values

The parameter drift values applicable to H.T.R.B. and Power Burn-in are specified in Table 4 of this specification. Unless otherwise stated, measurements shall be performed at  $T_{ref}\pm 3$  °C. The parameter drift values ( $\Delta$ ) applicable to the parameters scheduled, shall not be exceeded. In addition to these drift value requirements, the appropriate limit value specified for a given parameter in Table 2 shall not be exceeded.

#### 4.7.2 Conditions for High Temperature Reverse Bias Burn-in

Not applicable.

#### 4.7.3 Conditions for Power Burn-in

The requirements for power burn-in are specified in Section 7 of ESA/SCC Generic Specification No. 9020. The conditions for power burn-in shall be as specified in Table 5(b) of this specification.

#### 4.7.4 Electrical Circuits for High Temperature Reverse Bias Burn-in

Not applicable.

#### 4.7.5 Electrical Circuits for Power Burn-in

Circuits for use in performing the power burn-in test are shown in Figure 5(b) of this specification.

ISSUE 1

# 4.8 <u>ENVIRONMENTAL AND ENDURANCE TESTS (CHARTS IV AND V OF ESA/SCC GENERIC SPECIFICATION NO. 19020)</u>

#### 4.8.1 <u>Electrical and Electro-optical Measurements on Completion of Environmental Tests</u>

The parameters to be measured on completion of environmental tests are scheduled in Table 6. Unless otherwise stated, the measurements shall be performed at  $T_{ref} \pm 3$  °C.

#### 4.8.2 <u>Electrical and Electro-optical Measurements at Intermediate Points during Endurance Tests</u>

The parameters to be measured at intermediate points during endurance tests are scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at  $T_{ref} \pm 3$  °C.

#### 4.8.3 <u>Electrical and Electro-optical Measurements on Completion of Endurance Tests</u>

The parameters to be measured on completion of endurance testing are scheduled in Table 6 of this specification. Unless otherwise stated, the measurements shall be performed at  $T_{ref} \pm 3$  °C.

#### 4.8.4 Conditions for Operating Life Tests

The requirements for operating life testing are specified in Section 9 of ESA/SCC Generic Specification No. 9020. The conditions for operating life testing shall be as specified in Table 5(b) of this specification.

#### 4.8.5 <u>Electrical Circuits for Operating Life Tests</u>

Circuits for use in performing the operating life tests are shown in Figure 5(b) of this specification.

#### 4.8.6 Conditions for High Temperature Storage Test

The requirements for the high temperature storage test are specified in ESA/SCC Generic Specification No. 9020. The temperature to be applied shall be the maximum storage temperature specified in Table 1(b) of this specification.

#### 4.9 TOTAL DOSE IRRADIATION TESTING

#### 4.9.1 Application

If specified in Para. 4.2.1 of this specification, total dose irradiation testing shall be performed in accordance with the requirements of ESA/SCC Basic Specification No. 22900.

#### 4.9.2 Bias Conditions

Continuous bias shall be applied during irradiation testing as shown in Figure 6 of this specification.

#### 4.9.3 <u>Electrical and Electro-optical Measurements</u>

For all Variants, the parameters to be measured prior to irradiation exposure are  $I_L$  in accordance with Table 2 and those parameters scheduled in the individual Table 1(a) for Variant 01, with the Conditions and Limits as specified in the individual Table 1(a) for the Variant in question. Only devices which meet these requirements shall be included in the test sample.

The parameters to be measured during and on completion of irradiation testing are scheduled in Table 7 of this specification.
