7. Conclusions

Total dose steady-state irradiation test using gamma rays from Cobalt 60 has been carried out on 10 (8 Static On and 2 Static Off) **Quad Low Offset Operational Amplifiers OP400A-Y (DC 9644A)** from **Analog Devices** at low dose rate (≤ 0.35 krad(Si)/h) up to 100 krad(Si).

The results indicate that:

The first parameter which overstep specification is I_{ib+} (D) at 6 krad(Si) on part biased ON.
