NOTES

1. Relays should not be used in change over-mode where the potential difference between stationary contacts is greater than 10V and the switched current is greater than 0.1A.
2. Duration 10 seconds maximum at a distance of not less than 3.0mm from the device body and the same terminal shall not be resoldered until 3 minutes have elapsed.
3. The coil voltage rise time shall be less than $0.1t_L$ or $0.1t_r$. The coil voltage shall be applied for a minimum time of $10t_L$ or $10t_r$. Note that when the two coils are powered simultaneously, the relay may move to an intermediate position. In this case, application of the nominal voltage to either the latch or reset coil will restore to relay to its correct state.
