**NOTES**

1. GO-NO-GO Test, each pattern of Test Table 4(a).  
 $V_{OH} \geq V_{DD} - 0.5V_{dc}$        $V_{OL} \leq 0.5V_{dc}$
2. Maximum time to output comparator strobe 300 $\mu$ sec.
3. Test is performed with switch in both positions shown in Figure 4(b).
4. Interchange of forcing and measuring function is permitted.
5. Output power dissipation must be limited externally according to absolute maximum ratings.
6. Measured with external pull-up resistor 10k $\Omega$  connected between output under test and  $V_{DD}$ .
7. Measurement performed on a sample basis, LTPD7 or less, with a Capacitance Bridge connected between each input under test and  $V_{SS}$ , only for Lots where LAT Level 2 is to be performed. (For LTPD sampling plan, see Annexe I of ESA/SCC 9000).
8. Measurement performed on a sample basis, LTPD7 or less (see Annexe I of ESA/SCC 9000).
