**TABLE 2 - ELECTRICAL MEASUREMENTS AT ROOM TEMPERATURE (CONT'D)**

**NOTES**

1. GO-NO-GO Test, each pattern of Test Table 4(a).  
 $V_{OH} \geq V_{DD} - 0.5V_{dc}$        $V_{OL} \leq 0.5V_{dc}$
2. Maximum time to output comparator strobe 300 $\mu$ sec.
3. Test each pattern of Table 4(b).
4. For characterisation during qualification, the incremental method or the method shown in Figure 4(f)(ii), which incorporates a plotter, shall apply. For procurement, the Orderer may accept that the devices are tested go-no-go to the maximum limits of Table 2. In the case that go-no-go testing is performed, it is necessary that at least one discrete value shall be measured and recorded in order that drift values may be applied. Figure 4(f)(iii) shall be used for the discrete value measurement.
5. Measurement performed on a sample basis LTPD 7, or less, with a Capacitance Bridge connected between each input under test and  $V_{SS}$ , only for Lots where LAT Level 2 is to be performed. (For LTPD sampling plan, see Annexe I of ESA/SCC 9000).
6. Measurement performed on a sample basis LTPD 7, or less (see Annexe I of ESA/SCC 9000).
