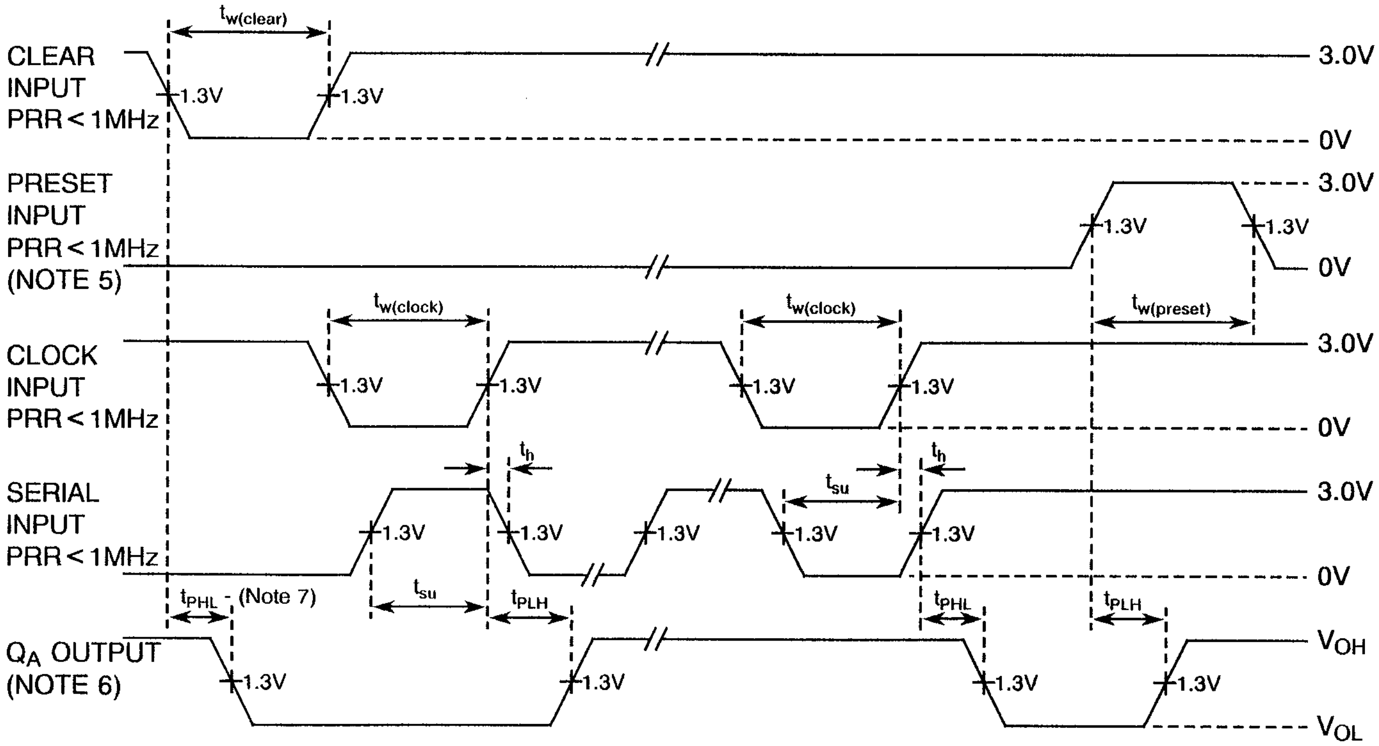
VOLTAGE WAVEFORMS



NOTES

1. Input pulses are supplied by pulse generators having the following characteristics: $t_r < 15ns$, $t_f < 6.0ns$, $Z_{OUT} = 50\Omega$, duty cycle<50%.
2. All diodes are 1N916 or 1N3064.
3. $C_L = 15pF$ including scope probe and jig capacitance.
4. $R_L = 2.0k\Omega$.
5. Preset may be tested by applying a high level voltage to the individual preset inputs and pulsing the preset enable or by applying a high level voltage to the preset enable and pulsing the individual preset inputs.
6. Q_A output is illustrated. Relationship of serial input to other Q outputs is illustrated in the typical shift sequence.
7. Outputs are set to the high level prior to the measurement of t_{PHL} from the clear input.
