'A'	Qualified Components List	4
-----	---------------------------	---

## 1. <u>FOREWORD</u>

This document contains a list of components that have been qualified to the rules of the ESCC System and are intended for use in ESA and other spacecraft and associated equipment in accordance with the requirements of the ECSS Standard ECSS-Q-60A.

It is permitted to advertise the ESCC qualification status of a product provided such publicity or advertisement does not state or imply that the product is the only qualified or capability approved one of that particular type, range or family.

#### 2. PROCURORS' RESPONSIBILITY

When procuring ESCC qualified or capability approved components, the procuror is responsible for ensuring that the qualification or capability approval status is valid and that delivered components fulfil the specified requirements of the applicable ESCC specifications. The procuror is advised to utilise the ESCC non-conformance system in the event that a qualified or capability approved manufacturer delivers non-conforming components.

#### 3. <u>USE OF TABLES</u>

### 3.1 <u>Publication</u>

The individual entries are published in sections within this document and are presented by manufacturer on the web, the starting point for which is:

### https://escies.org/public/escc/qpl/

#### 3.2 Type Designation

The referenced type (style) designations are derived from industrial standards (i.e., JEDEC, PRO-ELECTRON, MIL, IEC, and CECC). The purpose is to identify the similarity of a listed qualified component, to a standard type designation.

#### 3.3 <u>Component Characteristics</u>

The electrical characteristics are listed for guidance only and, unless otherwise stated, are specified at +25° C. The precise characteristics of the qualified component are defined in the referenced ESCC specification.

# 3.4 Manufacturer

Plant locations are indicated in the individual listings; contact information is given in full on the appropriate web pages accessed from:

#### https://escies.org/public/escc/qpl/

# 4. <u>REVISION PROCEDURE</u>

Amendments to earlier issues of the QPL implemented herein are indicated by the date on the front page and by the content of the "Document Changes" pages. The latter provide the changes over a one year period. (The <u>same</u> issue date appears on the table at the start of each Section of the Appendix irrespective of whether changes have been made in a particular section. This indicates the information has been reviewed and is current.) The ESA/SCC System is superseded by the ESCC (European Space Components Coordination) System and in consequence this issue of the ESCC QPL is the first one.

# 5. TABLE OF QUALIFIED COMPONENTS

Components qualified to the ESCC System are grouped by component type designations. Individual components are listed within the relevant sections as indicated in Table 5.1.

Section	Component Types
01	Capacitors
02	Connectors
03	Crystals
04	Diodes
05	Filters
06	Fuses
07	Inductors
08	Microcircuits
09	Relays
10	Resistors
11	Thermistors
12	Transistors
13	Wire and Cables
14	Miscellaneous

#### **CAPABILITY ABSTRACT**

The F20 (IS and IG) analogue standard cell MMIC process is based on direct ion implantation of semi-insulating GaAs substrates. FETs are fabricated utilising 0.5 µm gate lengths and TiPtAu gate metal. A composite silicon nitride/polyimide dielectric system combines with two levels of interconnect metal to form complex components and circuit topologies without the need for air bridges. Through GaAs vias are used for device grounding. The F20 process is suitable for microwave applications in radiation intensive environments.

## **BASIC F20 TECHNOLOGY INFORMATION**

Two Level Metal and dielectric, ion implant substrates

I wo Level Metal and dielectric, io				
Operating Temperature	: T <sub>ch max.</sub> +150 ° C			
Storage Temperature	: - 65 ° C to +150 ° C			
Max. Operating Frequency	: > 200 GHz			
RF Output Power	: 250 mW/mm gate width (IG)			
	: 300 mW/mm gate width (IS)			
Max. Power Dissipation (FET)	: 1 W/mm gate width (IG)			
	: 2 W/mm gate width (IS)			
Max. Power Dissipation (die)	: 0.5 W/mm <sup>2</sup>			
Max. Die Size	: 12.7 mm x 12.7 mm			
Total Dose Tolerance	: < 100 kRad(Si)			
	: simulation supported to 80 kRad(Si)			
Radiation Latch-up	: ≤140 MeV/(mg/cm²)			
SEU Tolerance	: LET ≥54 MeV/(mg/cm <sup>2</sup> )			
ESD protection	: ≤1kV			
Design Style	: Standard cell			
Cell Library	: F20 Foundry 3			
Application	: Small signal analogue			
Design Systems	: CADENCE, WAVEMAKER			
Simulators	: LIBRA, LINMIC, HARMONICA, HPMDS, MMICAD			
Packages	: Custom, ceramic, metal

FETs: (pie) gate 1, 2, 4 or 6 finger. Finger widths 50 μm to 175 μm in 1 μm steps Maximum ratings:
IG: Vds 6V/Vgs -8V or Vds 6V/Vgd -8V; 1 W/mm gate width; T<sub>ch</sub>. 150 ° C
IS: Vds 6V/Vgs -10V or Vds 6V/Vgd -10V; 2 W/mm gate width; T<sub>ch</sub>. 150 ° C
Inductors: 1-10 turn planar, 1-5 turn stacked; 18 nH maximum Maximum current rating: 10A/mm line width (Planar)
Capacitors: Silicon nitride dielectric 0.5 to 59 pF, silicon nitride/polyimide composite dielectric 0.06 - 2.5 pF. Maximum rating: 15V
Resistors: Implanted 10 Ohm to 10K Ohm
Transmission: Characteristic impedance 40 Ohm to 110 Ohm

Lines: Maximum current rating: 10A/mm line width

#### **RADIATION RESISTANCE**

There is no discernible change in device performance during or following irradiation from either a 3 MeV electron source at a maximum rate of 5 x 10<sup>4</sup> Gy (Si)  $\cdot$  s <sup>-1</sup> to a total dose of 1 KGy or a 300 MeV proton source to a total dose of 1 KGy or following irradiation using a 1.2 MeV gamma-photon source at 1.5 Gy (Si)  $\cdot$  s <sup>-1</sup> to a total dose of 1 KGy. Irradiation from a 4 MeV electron source at 5x10<sup>2</sup> Gy (Si)  $\cdot$  min <sup>-1</sup> to a total dose of 10 KGy results in less than 0.8% change in device performance.

## PACKING DENSITY AND CHIP SIZES

The packing density depends on circuit function but is ultimately limited by the need to maintain the minimum layer spacing defined in the Design Manual and the maximum  $T_{ch}$  of 150 ° C. The maximum circuit array size is 127 mm x 127 mm which is also the maximum chip size. Chip size is also limited by a maximum aspect ratio of 3:1.

# DIE ATTACH, WIRE BONDING AND PACKAGING

Dieattach is by Au/Sn (80:20) eutectic solder bonding. The maximum permissible time/temperature exposure of a chip during die or wire bonding is 2 minutes at 310 ° C.

Wire bonding is by gold wire and thermocompression bonding with a maximum bond tool loading for 1" Au wire of 50g.

Packaging, die attach and wire bonding are carried out in an inert gas atmosphere. The maximum die size utilised to date is 6.9 x 2.3 mm. Package types used for either test vehicles or MMICs have included 16 pin side-brazed DILs, 20-way metal/ceramic microwave packages and 14-way Cu/Mo/ceramic packages.
