### FOREWORD

This document contains a list of qualified manufacturers that have been certified by the European Space Agency for Technology Flows to the rules of the ESCC System with principle reference to ESCC Basic Specification No. 25400.

The qualified electronic components produced from the Technology Flows are intended for use in ESA and other spacecraft and associated equipment in accordance with the requirements of the ECSS Standard ECSS-Q-60.

Each Technology Flow qualification and its subsequent maintenance is monitored and overseen by the ESCC Executive. ESA certifies the qualification upon receipt of a formal application from the Executive stating that all applicable ESCC requirements have been met by the pertinent manufacturer. The qualified status of a Technology Flow is noted by an entry in this document, a corresponding entry in the European Space Components Information Exchange System, ESCIES, and the issue of a certificate to the qualified manufacturer.

**ISSUE 1** 

#### 1. PROMOTION

It is permitted to advertise the ESCC qualification status of a component provided such publicity or advertisement does not state or imply that the component is the only qualified one of that particular type, range or family.

#### 2. <u>PROCURER'S RESPONSIBILITY</u>

When procuring ESCC qualified components, the procurer is responsible for ensuring that the qualification status is valid and that delivered components fulfil the specified requirements of the applicable ESCC specifications. The procurer is advised to utilise the ESCC non-conformance system, per ESCC Basic Specification No. 22800, in the event that a qualified manufacturer delivers non-conforming components.

### 3. <u>QML ORGANISATION</u>

#### 3.1 <u>TECHNOLOGY FLOWS</u>

The individual Technology Flows are listed in this document by manufacturer in alphabetical order. They may also be found on the ESCIES web site, https://escies.org.

The controlling ESCC specifications are identified and a Technology Flow Abstract is provided to describe the main features of the qualified Technology Flow.

#### 3.2 QUALIFIED COMPONENTS

Under each technology flow a list of the qualified components is provided. As new components are specified in an ESCC Detail Specification and are produced within the Technology Flow the list will be updated accordingly.

#### 3.3 <u>TYPE DESIGNATION</u>

Wherever possible the referenced type (style) designations are derived from industrial standards (i.e., JEDEC, PRO-ELECTRON, MIL, IEC and CECC). The purpose is to identify the similarity of a listed qualified component, to a standard type designation. Where no standardised type designation is applicable the manufacturer's designation is referenced.

#### 3.4 COMPONENT CHARACTERISTICS

The electrical characteristics described in the Technology Flow Abstract are provided for guidance only and, unless otherwise stated, are specified at +25°C. The precise characteristics of the qualified component are defined in the referenced ESCC specifications.

#### 3.5 <u>MANUFACTURER</u>

Contact information and plant locations are indicated in the individual Technology Flow listings. Contact information may also be found in the ESCC QML section of the ESCIES web site,

PAGE 7

ISSUE 1

https://escies.org.

### 4. <u>REVISION PROCEDURE</u>

Amendments to earlier issues of the ESCC QML, implemented herein, are indicated by the issue date and by the content of the relevant "Document Change Request".

#### 5. QUALIFIED TECHNOLOGY FLOWS

The following Technology Flows are qualified:

### **Initial Qualification**

Qualification Certificate No.	Validity Dates	Type Designation
278	Dec. 2006 - Dec. 2008	Integrated Circuits, Silicon Monolithic, CMOS Gate/ Embedded Array based on type MH1RT

#### Maintenance of Qualification

Qualification Certificate No.	Validity Dates	Comment

#### **Applicable Documents**

ESCC Generic Specification No. 9000

ESCC Detail Specification No. 9202/076

Atmel Process Identification Document PID 0026

#### **List of Qualified Components**

For each ASIC design an ASIC Sheet is produced by Atmel for use in conjunction with the ESCC Detail Specification No. 9202/076. Where the ASIC is not proprietary to the customer the ASIC sheet is published in ESCIES as a supporting document. Availability of the ASIC sheet is indicated in the table by an \* in the final column.

### **Technology Flow Abstract**

1. Technology Flow

The MH1RT gate array family is designed with a  $0.35\mu$ m radiation tolerant CMOS technology. The offering is based on a 4 metal layer 3.3volts AT56KRT process.

The family features arrays with up to 1.6 million routeable gates and 596 pads. The MH1RT is suitable for high speed, low power digital applications working in a radiation intensive environment.

The Technology Flow covers the foundry design, fabrication, assembly and testing of the MH1RT Sea of Gates family.

	Scope	Site
Design Centre	Array Sizes: - 99K - 156K - 242K - 332K - 3V and 5V tolerant/compliant	Atmel Nantes BP 70602 44306 Nantes Cedex 3 France
Wafer Fabrication	Process Flow: AT56KLRT	Atmel Rousset Zone Industrielle 131106 Rousset Cedex France
Assembly	Packages: - Multilayer Quad Flat Pack 196, 256, 352 pins - Multilayer Column Grid Array 349, 472 pins	E2V Grenoble BP 123 38521 Saint-Egrève Cedex France

- (a) Basic Information
  - 0.35µm CMOS technology AT56KRT Process.
    - High Speed Performance
      - 170 ps typical gate delay (NAND, fanout 2) @ 3V
      - 800 MHz typical toggle frequency @ 3.3V
  - Triple Supply Operation
    - 3.3, 3 and 2.55 V operation
    - 5V compliant
    - 5V tolerant
  - Low Supply Current
    - Operating Maximum Value 0.32 μW/gate/MHz @ 2.5V, 0.54 μW/gate/MHz @ 3V, 0.69 μW/gate/MHz @ 3.3V
    - Maximum Stand-by Value 4nA/gate@ 2.5V 5nA/gate@ 3 and 3.3V
  - 472 pins maximum (MCGA 472 package)
  - I/O Interface
    - CMOS, LVTTL, LVDDS, PCI, USB
    - Output Currents Programmable from 2 to 24 mA, by Steps of 2 mA
    - Cold Sparing Buffers (2μA maximum leakage current at 3.6V and 125°C)

PAGE 11

ISSUE 1

- Radiation
  - qualified to 1000 Gy(Si) letter R per ESCC Basic Specification No. 22900, tested successfully to 2000 Gy(Si)
  - No Single Event Latch-up below a LET Threshold of 70 MeV/mg/cm<sup>2</sup>
  - SEU Hardened Flip-flops
- Four Arrays and Four Composite Arrays
  - Device Types

Refer to ESCC Detail Specification No. 9202/076

(b) Component Types

This table presents the available couples (array, package) as defined in the Variants table in the Detail Specification.

	TH1099E	TH1156E	TH1242E	TH1332E
Array Designation	TH1M099E	TH1M156E	TH1M242E	TH1M332E
Array size	99K	156K	242K	332K
Package				
MQFP-T352	Х	Х	Х	Х
MQFP-F256	Х	Х	Х	
MQFP-F196	Х			
MCGA 472		Х	Х	Х
MCGA 349	Х	Х	Х	

### 2. Design

The design manual and the ASIC library data books cover design at the Atmel Nantes Design Centre.

- MH1RT Design Manual ATD-TS-LR-R0232
- MH1RT 2V5 ASIC Library Data book ATD-TS-LR-R0236
- MH1RT 3V ASIC Library Data book ATD-TS-LR-R0235
- MH1RT 3V3 ASIC Library Data book ATD-TS-LR-R0238

ASIC designs are performed by the Atmel customer at their own site, with Atmel supported tools (front end) provided as a design tool kit.

3. Fabrication

The AT56KRT Radiation Tolerant process at Atmel Rousset is a 0.35 $\mu$ m CMOS, 4 metal, Ti, TiN and AlCu process.

#### 4. Assembly

Atmel Nantes assembles the MH1RT devices at E2V Grenoble. This Technology Flow covers the following capabilities.

PAGE 12

**ISSUE 1** 

Package	Die Attach	Wire Bond	Lid Seal	Leads
MQFP	Silver Glass (QMI2569)	Ultrasonic Wedge, 32 μm Al	Brazed Sealed with Au/Sn Alloy	Au Plated
MCGA	MCGA Cyanate Ester (JM7600)	Ultrasonic Wedge, 32 μm Al	Brazed Sealed with Au/Sn Alloy	Sn/Pb

#### 5. Test

TCVs and SEC

The TH1156E matrix is used for both test vehicles.

(a) Test Vehicle V37

The V37 is a buffer test vehicle representative of the range of buffers available for performance testing in the MQFP 256 package.

(b) Test Vehicle V38

The V38 is developed for performance and radiation testing in the MQFP 256 package. It tests the following library elements;

- LVDS input and output buffers
- PCI 3V and 5V output buffers
- PLL (125 MHz and 250 MHz)
- DPRAM memory cell for GENESYS tool

#### (c) SEC

The standard evaluation circuit for reliability testing is the 65609E.

#### 6. Radiation Characteristics

The MH1RT family has been developed to fulfil the following characteristics in terms of radiation tolerance:

- Tested up to 2000 Gy(Si)
- No Single Event Latch-up below a LET Threshold of 70MeV/mg/cm<sup>2</sup>
- Availability in the library of SEU hardened cells

The radiation capability of the MH1RT family has been tested during development and evaluated in total dose and for single event effects to confirm the stated characteristics.

Lot radiation verification testing is performed if specified by the procurer's purchase order requirements.
