FOREWORD

This document contains a list of qualified manufacturers that have been certified by the European Space Agency for Technology Flows to the rules of the ESCC System with principle reference to ESCC Basic Specification No. 25400.

The qualified electronic components produced from the Technology Flows are intended for use in ESA and other spacecraft and associated equipment in accordance with the requirements of the ECSS Standard ECSS-Q-60.

Each Technology Flow qualification and its subsequent maintenance is monitored and overseen by the ESCC Executive. ESA certifies the qualification upon receipt of a formal application from the Executive stating that all applicable ESCC requirements have been met by the pertinent manufacturer. The qualified status of a Technology Flow is noted by an entry in this document, a corresponding entry in the European Space Components Information Exchange System, ESCIES, and the issue of a certificate to the qualified manufacturer.

1. PROMOTION

It is permitted to advertise the ESCC qualification status of a component provided such publicity or advertisement does not state or imply that the component is the only qualified one of that particular type, range or family.

2. PROCURER'S RESPONSIBILITY

When procuring ESCC qualified components, the procurer is responsible for ensuring that the qualification status is valid and that delivered components fulfil the specified requirements of the applicable ESCC specifications. The procurer is advised to utilise the ESCC non-conformance system, per ESCC Basic Specification No. 22800, in the event that a qualified manufacturer delivers non-conforming components.

3. QML ORGANISATION**3.1 TECHNOLOGY FLOWS**

The individual Technology Flows are listed in this document by manufacturer in alphabetical order. They may also be found on the ESCIES web site, <https://escies.org>.

The controlling ESCC specifications are identified and a Technology Flow Abstract is provided to describe the main features of the qualified Technology Flow.

3.2 QUALIFIED COMPONENTS

Under each technology flow a list of the qualified components is provided. As new components are specified in an ESCC Detail Specification and are produced within the Technology Flow the list will be updated accordingly.

3.3 TYPE DESIGNATION

Wherever possible the referenced type (style) designations are derived from industrial standards (i.e., JEDEC, PRO-ELECTRON, MIL, IEC and CECC). The purpose is to identify the similarity of a listed qualified component, to a standard type designation. Where no standardised type designation is applicable the manufacturer's designation is referenced.

3.4 COMPONENT CHARACTERISTICS

The electrical characteristics described in the Technology Flow Abstract are provided for guidance only and, unless otherwise stated, are specified at +25°C. The precise characteristics of the qualified component are defined in the referenced ESCC specifications.

3.5 MANUFACTURER

Contact information and plant locations are indicated in the individual Technology Flow listings. Contact information may also be found in the ESCC QML section of the ESCIES web site, <https://escies.org>.

4. REVISION PROCEDURE

Amendments to earlier issues of the ESCC QML, implemented herein, are indicated by the issue date and by the content of the relevant "Document Change Request".

5. QUALIFIED TECHNOLOGY FLOWS

The following Technology Flows are qualified:

5.1 ATMEL

Technology Flow Abstract

1. Technology Flow

The MH1RT gate array family is designed with a 0.35µm radiation tolerant CMOS technology. The offering is based on a 4 metal layer 3.3volts AT56KRT process.

The family features arrays with up to 1.6 million routeable gates and 596 pads. The MH1RT is suitable for high speed, low power digital applications working in a radiation intensive environment.

The Technology Flow covers the foundry design, fabrication, assembly and testing of the MH1RT Sea of Gates family.

	Scope	Site
Design Centre	Array Sizes: - 99K - 156K - 242K - 332K - 3V and 5V tolerant/compliant	Atmel Nantes BP 70602 44306 Nantes Cedex 3 France
Wafer Fabrication	Process Flow: AT56KLRT	LFoundry Rousset Zone Industrielle 131106 Rousset Cedex France

- CMOS, LVTTTL, LVDDS, PCI, USB
- Output Currents Programmable from 2 to 24 mA, by Steps of 2 mA
- Cold Sparring Buffers (2µA maximum leakage current at 3.6V and 125°C)

- Radiation
 - qualified to 1000 Gy(Si) letter R per ESCC Basic Specification No. 22900, tested successfully to 2000 Gy(Si)
 - No Single Event Latch-up below a LET Threshold of 70 MeV/mg/cm²
 - SEU Hardened Flip-flops

- Four Arrays and Four Composite Arrays
 - Device Types
Refer to ESCC Detail Specification No. 9202/076

(b) Component Types

This table presents the available couples (array, package) as defined in the Variants table in the Detail Specification.

Array Designation	TH1099E	TH1156E	TH1242E	TH1332E
	TH1M099E	TH1M156E	TH1M242E	TH1M332E
Array size	99K	156K	242K	332K
Package				
MQFP-T352	X	X	X	X
MQFP-F256	X	X	X	
MQFP-F196	X			

2. Design

The design manual and the ASIC library data books cover design at the Atmel Nantes Design Centre.

- MH1RT Design Manual ATD-TS-LR-R0232
- MH1RT 2V5 ASIC Library Data book ATD-TS-LR-R0236
- MH1RT 3V ASIC Library Data book ATD-TS-LR-R0235
- MH1RT 3V3 ASIC Library Data book ATD-TS-LR-R0238

ASIC designs are performed by the Atmel customer at their own site, with Atmel supported tools (front end) provided as a design tool kit.

3. Fabrication

The AT56KRT Radiation Tolerant process at Atmel Rousset is a 0.35µm CMOS, 4 metal, Ti, TiN and AlCu process.

4. Assembly

Atmel Nantes assembles the MH1RT devices at E2V Grenoble.
 This Technology Flow covers the following capabilities.
 Solderability testing for MCGA packages is included.
 Die attach for MQFP package is Cyanate Ester (JM7600).

Package	Die Attach	Wire Bond	Lid Seal	Leads
MQFP	Cyanate Ester (JM7600)	Ultrasonic Wedge, 32 μm Al	Brazed Sealed with Au/Sn Alloy	Au Plated

5. Test

TCVs and SEC

The TH1156E matrix is used for both test vehicles.

(a) Test Vehicle V37

The V37 is a buffer test vehicle representative of the range of buffers available for performance testing in the MQFP 256 package.

(b) Test Vehicle V38

The V38 is developed for performance and radiation testing in the MQFP 256 package.

It tests the following library elements;

- LVDS input and output buffers
- PCI 3V and 5V output buffers
- PLL (125 MHz and 250 MHz)
- DPRAM memory cell for GENESYS tool

(c) SEC

The standard evaluation circuit for reliability testing is the 65609E.

(d) The use of Transition Delay Fault (TDF) vectors are recommended.

6. Radiation Characteristics

The MH1RT family has been developed to fulfil the following characteristics in terms of radiation tolerance:

- Tested up to 2000 Gy(Si)
- No Single Event Latch-up below a LET Threshold of 70MeV/mg/cm²
- Availability in the library of SEU hardened cells

The radiation capability of the MH1RT family has been tested during development and evaluated in total dose and for single event effects to confirm the stated characteristics. Lot radiation verification testing is performed if specified by the procurer's purchase order requirements.

NOTES:

- Note that gold finish variants are not intended for de-golding and tinning.

Technology Flow Abstract

- Technology Flow

The thin film technology for chip, fixed, wraparound, single and network resistors are designed on types based on P for single chip, PRA for 2 to 8 resistors of similar value and CNW for 2 to 8 resistors with at least two different values with the same form factor as PRA.

Technology Flow	Scope	Site
Design Centre	Single resistor chips in 0603, 0805, 1206 and 2010 formats 2 to 8 resistors of similar value in formats 0603, 0805 and 1206 2 to 8 resistors with at least 2 different values with the same form factor, 0603, 0805 or 1206	Vishay S.A. Division Résistances de Très Haute Précision 199, Boulevard de la Madeleine B.P. 1159 06003 Nice Cedex 1 France
Fabrication	Film deposition Photolithography Thermal treatment Passivation Thermal stabilization and control	As above
Assembly	Laser trim Protective layer Termination and Test	As above
Test	Chart F2, F3 and F4 Periodic Testing	As above

(a) Basic Information

The technology consists of:

- Substrate: High purity alumina (99.5%)
- Resistive Layer: Nickel chromium
- Passivation Layer: Silicon Nitride
- Protection: Epoxy and Silicone
- Termination: Nickel barrier
- Processes: Thin film deposition
- Finish: SnPbAg or Au

Critical resistance by style:

- P 0603 FR: 25 k Ω
- P 0603 HR: 12.25 k Ω
- P 0805 FR: 80k Ω
- P 0805 HR: 45 k Ω
- P 1206 FR: 90 k Ω
- P 1206 HR: 40 k Ω
- P 2010 FR: 80k Ω
- P 2010 HR: 45 k Ω
- PRA 100: 12.25 k Ω
- PRA 135: 56.25 k Ω
- PRA 182: 100 k Ω

(b) Component Types

The available formats are defined in the variants table in the Detail Specifications.

Variants with established reliability in accordance with Basic specification No. 26000 are designated with an "FR" suffix here for convenience. Variants 09, 10, 11 and 12 have established reliability level 'R' at 60% confidence level.

2. Design

The design manuals covers the design rules and limits:

- HP-BE/001 (Maîtrise de la conception)
- HP-BE/004 (Données technologiques, Règles d'implémentation, Performances)

Critical design characteristics:

- Minimum metal width: 10 μ m
- Power dissipation lower than 250mW/mm²
- Current density lower than 7000 A/mm²
- Electrical field lower than 5V/ μ m

3. Fabrication/Assembly

The manufacturing flows and procedures are described in section 4 of Vishay S.A.PID.

4. Test

Complete test sequence as detailed in ESCC Generic 4001 and the relevant Detail Specifications is conducted by Vishay S.A..

The deletion of the Third Harmonic Control requirement from ESCC Detail Specification No. 4001/023 for thin film wraparound technology is documented in reference report MAT/3HC/07.02 revision 3 dated 2007-06-20.

For variants with established reliability the efficiency of the Overload Test is increased with the implementation of a resistance change rejection criteria of 500 ppm and approved by TRB decisions on 2007-04-04.

5. Radiation Characteristics

The resistors covered in this technology domain is considered insensitive to radiation effects.

PID630_4 SAW Crystal Manufacturing with flow NORSF-C1

List of Qualified Components

For each design a detail specification is produced by Norspace. Where the SAW component is not proprietary to the customer the detail specification is published in ESCIES as a supporting document. Available detail specifications are found in the table below.

Detail Specification	Component Type
3502/0022	SAW Filters, Hermetically Sealed, Surface Mount, Frequency Range 10 MHz - 4 GHz

Technology Flow Abstract

1. Technology Flow

The Technology Flow covers the design, fabrication, assembly, screening, in-process control and testing of the Norspace SAW filters manufactured within the NORSF-C1 and NORSF-A1 processes. The design, crystal manufacturing, assembly, screening and testing is performed in the Norspace facility at Knudsrødveien 7 in Horten, Norway.

Technology Flow	Scope
Design	Norspace specification Ko 03.00

Technology Flow	Scope
Screening and Test	<ul style="list-style-type: none"> - Incoming inspection - In-process inspection - 100% Wafer probe electrical test - 100% Visual inspection - Final production tests - Customer Source Inspection - Screening - Burn-in and electrical measurements - Test procedures - External visual inspection - Qualification testing - Lot acceptance testing

(a) Basic Information

The SAW devices are passive devices and typically require external tuning.

Frequency range: From 10 MHz up to 4 GHz.

Max operating temperature range: -30 / +85 °C (maximum), -20 / +70 °C (typical).

Input power: design sensitive.

(b) Component Types

- Transversal band pass SAW filters with frequencies up to 4 GHz.
- SAW Resonator filters
- SAW Notch filters
- Impedance element filters with low loss

2. Design

The design programs are in-house developed procedures and libraries. Each new design is custom made for the application by Norspace design engineers. The design centre is in Horten, Norway.

(a) Transversal band pass SAW filters

The transversal filters consist of one input transducer and one output transducer, see figure below. The transducers are interdigital transducers formed by a metal pattern on a piezoelectric material (wafer). The transducers can be withdrawal weighted and/ or length (apodization) weighted. The detailed weighting functions are calculated in a dedicated filter synthesis software and used as input to the mask layout software. The simulation of the filter response is performed by a dedicated SAW Analysis software.

(b) Resonator filters

The resonator filter consists of input and output transducers as described above. These are normally unweighted. The transducers are backed by reflectors, see figure below. The reflectors are 1/4 wide etched grooves or metal fingers. The same Software is used for simulation of the transducers and reflectors.

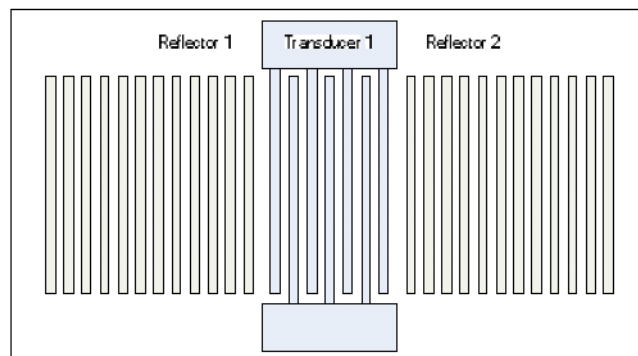

(c) SAW Notch filters

The notch are based on single port resonator elements, so called impedance elements (see below).

- Impedance element filters with low loss

Impedance element filters are constructed from one port SAW resonators. The one port SAW resonators consist of one interdigital transducer backed by one reflector on each side, as shown in the figure below.

3. Fabrication

The NORSF-C1 process at Norspace comprises

- SAW crystal manufacturing on SAW grade polished single crystal wafers from quartz, LiNbO₃, LiTaO₃ and La₃Ga₅SiO₁₄ (langasite)
- Externally purchased SAW wafers
- SAW wafer thickness between 0.5 mm and 1.5 mm
- Photolithography with line widths down to 0.3 μm. No upper limit.

- Metallization performed with Al or Cr/Al. Metal thickness 400 to 10 000 Å.

The process can manufacture SAW elements of band pass, resonator or notch type with centre frequencies in the range 10 MHz to 4 GHz.

4. Assembly

Norspace assembly flow NORSF-A1 technology flow covers the following capabilities:

Package	Die Attach	Wire Bond	Lid Seal	Leads
Flatpack/LCC. Au plated. CuW base/ Fe-Ni-Co alloy or ceramic with Fe-Ni-Co alloy seal ring.	Silicone rubber	Ultrasonic ball- wedge, 25 µm Au wire	Resistance seam sealing. N ₂ atmosphere.	Au plated

5. Test

Measurements are performed using a Vector Network Analyzer (VNA),

All equipment in the electrical test set-up shall have the same characteristic impedance. The S-parameters are measured on the VNA and transferred to a PC for post-processing and analysis. Before testing the VNA and its test cables must be calibrated as specified in the manual for the instrument (full 2-port calibration).

Test vehicles used for qualification: SQF-3800, SLC-4320.

Test vehicles used for maintenance: SQF-3800, SLC-3900, or similar devices.

6. Radiation

- The devices are regarded as radiation insensitive within a small drift in centre frequency and phase allowed for in the design margins.
- Radiation testing has been performed successfully up to 50 MRad(Si) for quartz and 1 MRad(Si) for LiNbO₃, LiTaO₃ and Langasite.

Qualified wafer materials: Quartz, LiNbO₃, LiTaO₃, Langasite (La₃Ga₅SiO₁₄).
