1 GENERAL

1.1 SCOPE

This specification details the ratings, physical and electrical characteristics and test and inspection data for the component type variants and/or the range of components specified below. It supplements the requirements of, and shall be read in conjunction with, the ESCC Generic Specification listed under Applicable Documents.

1.2 APPLICABLE DOCUMENTS

The following documents form part of this specification and shall be read in conjunction with it:

- (a) ESCC Generic Specification No. [4009](#).
- (b) MIL-P-46112: Military Specification for Polyimide Plastic Sheet and Strip.
- (c) ASTM-D5213: Standard Specification for Polymeric Resin Film for Electrical Insulation and Dielectric Applications.

1.3 TERMS, DEFINITIONS, ABBREVIATIONS, SYMBOLS AND UNITS

For the purpose of this specification, the terms, definitions, abbreviations, symbols and units specified in ESCC Basic Specification No. [21300](#) shall apply.

1.4 THE ESCC COMPONENT NUMBER AND COMPONENT TYPE VARIANTS

1.4.1 The ESCC Component Number

The ESCC Component Number shall be constituted as follows:

Example: 400900201A1234

- Detail Specification Reference: 4009002
- Component Type Variant Number: 01 (as required)
- Manufacturer Specific Heater Identification: A1234 (as applicable) where:
 - A: First letter of the applicable Manufacturer's name
 - 1234: A unique 4 digit number, sequentially allocated by the applicable Manufacturer to a specific heater design.

1.4.2 Component Type Variants and Range of Components

The component type variants and range of components applicable to this specification are as follows:

NOTES

- See Physical Dimensions and Heater Outline.
- UTP = Unjacketed Twisted Pair; JTP = Jacketed Twisted Pair; STP = Shielded Twisted Pair.
- The Heating Area, S, shall be:
 - Individual, single layer heaters: 1.6 to 1300cm²
 - Strip, single layer heaters: 3.2 to 312cm²
 - Individual, double layer heaters: 1.6 to 1300cm²
- The total maximum weight of the heaters, excluding the weight of the terminal leads, shall be:
 - Individual or Strip, single layer heaters: 50mg/cm²
 - Individual, double layer heaters: 75mg/cm²

The weight of the terminal leads shall be as specified in the applicable wire ESCC Detail Specification.

1.4.3 Manufacturer Specific Heater Identification

A Heater Design Drawing shall be produced by the Manufacturer after negotiation with the Orderer and shall be held under configuration control by the Manufacturer who will allocate a unique Manufacturer Specific Heater Identification sequentially when a request for a heater is received.

Each Heater Design Drawing shall include the following information:

- The heater outline and dimensions as required by Physical Dimensions and Heater Outline herein. This shall include details of the heater type and construction, and the terminal leads configurations including the angle of exit of each terminal lead with respect to the heater body.
- The ESCC Component Number for the heater, including the Manufacturer Specific Heater Identification.
- The terminal leads' ESCC Detail Specification and Component Number.
- The heater electrical information as follows:
 - Resistance value Rn and tolerance by circuit at T_{amb} = +22 ±3°C.
 - Maximum rated power in still air at T_{amb} = +25°C.
- Track width and spacing with tolerances.
- Cover material (if fitted).
- Pressure sensitive tape (if fitted).
- Dimensions of pre-form, if required.

1.5 MAXIMUM RATINGS

The maximum ratings shall not be exceeded at any time during use or storage.

Maximum ratings shall only be exceeded during testing to the extent specified in this specification and when stipulated in Test Methods and Procedures of the ESCC Generic Specification.

Characteristics	Symbols	Maximum Ratings	Units	Remarks
Rated Power Density	P _n	0.54	W/cm ²	Notes 1, 2, 3, 4
Operating Temperature Range	T _{op}	-65 to +200	°C	T _{amb} Note 3
Storage Temperature Range	T _{stg}	-65 to +200	°C	-
Rated Voltage	U _R	$\sqrt{P_n \cdot R_n \cdot S}$	V	Notes 2, 3, 5

NOTES:

- With heater suspended in still air at T_{amb} = +25°C.
- Actual rated power shall be specified in the applicable Heater Design Drawing. It shall be determined from the Heating Area (S) in cm².
- Rated Power Density shall be derated against temperature and Heating Area as follows:
 - P_n = 0.54W/cm² for T_{amb} ≤ +25°C. Derate to 0W/cm² at 0.00308W/cm²/°C for +25°C < T_{amb} ≤ +200°C.
 - P_n = 0.54W/cm² for 1.6cm² ≤ Heating Area (S) ≤ 300cm². Derate to 0.3W/cm² at 0.00024W/cm²/cm² for 300cm² < Heating Area (S) ≤ 1300cm².
- The following design rule shall be applied:
Area of Heater Resistive Element ÷ Heating Area (S) = 50 ±10%
- R_n is the nominal resistance.

1.6 PHYSICAL DIMENSIONS AND HEATER OUTLINE

The general physical dimensions and heater layout shall be as follows. The heater type, construction, physical dimensions and heater layout applicable to a specific heater will be specified in the Heater Design Drawing held by the Manufacturer.

INDIVIDUAL HEATER

STRIP HEATER (NOTE 2)

Symbol	Dimensions mm		Tolerance ± mm	Heater Type	Remarks
	Min	Max			
A	6	590	0.5	Individual

F	0.4	-	-	Individual & Strip	Notes 8, 9
G	610	2500	0.5	Strip	Note 10
S	Note 1		-	Individual & Strip	Note 1

NOTES

- The Heating Area, S, is defined as the total area of the heater excluding the peripheral margin, and the terminal lead and/or bridging tab connection areas. For Strip heaters, the Heating Area is the total for all the individual heaters connected together. The acceptable limits of S are specified in Component Type Variants and Range of Components.
- A Strip heater is made up of 2 to 5 individual, single layer heaters connected together in series by means of bridging tabs welded to each individual heater's connection pads.
- Strip heater width. All individual heaters in the Strip heater shall have the same width.
- The length of each individual heater in the Strip heater.
- The tolerance shall be $\pm 10\%$ on the required dimension.
- The tolerance shall be $\pm 0.5\text{mm}$ on the required dimension.
- Terminal lead spacing shall be measured at the terminal lead connection area. Terminal leads may exit the terminal lead connection area at any angle. The terminal leads may be located on any side of the heater. There may be more than 2 terminal leads (for multiple resistive element and double layer heaters).
- Peripheral margin dimension.
- Perforated holes in the peripheral margin are allowed provided that the distance between the edge of the hole and the heater resistive element or connection pad is equal to, or greater than, dimension F.
- The total length of the Strip heater.

1.6.1 Heater Thickness

The maximum thicknesses for single layer and double layer heaters are as follows:

- 0.25mm maximum for Individual or Strip, single layer heaters.
- 0.4mm maximum for Individual, double layer heaters.

These maximum limits do not apply over the terminal lead and/or bridging tab connection areas.

1.7 MATERIALS AND FINISHES

1.7.1 Heater Resistive Element

The heater resistive element shall be made of flexible nickel/chromium/iron alloy (76/16/8 Inconel).

1.7.2 Strip Heater Bridging Tabs

Bridging Tabs used to connect individual heaters to form a Strip heater shall be made of flexible nickel/chromium/iron alloy (76/16/8 Inconel). They shall be electrically welded to the heater resistive elements.

1.7.3 Protective Coating

Heater resistive elements, terminal leads connections and, for Strip heaters, bridging tabs connections shall be completely coated with Polyimide Polymer/FEP in accordance with MIL-P-46112 (as superseded by ASTM-D5213).

1.7.4 Terminal Leads

Terminal leads shall be made of multi-strand silver-plated copper in accordance with ESCC Generic Specification No. [3901](#). The applicable Heater Design Drawing shall specify the wire ESCC Detail Specification and the wire ESCC Component Number. The wire gauge shall be as specified in Component Type Variants and Range of Components herein. Terminal leads shall be electrically welded to the heater resistive element.

2 REQUIREMENTS

2.1 GENERAL

The complete requirements for procurement of the components specified herein are as stated in this specification and the ESCC Generic Specification. Permitted deviations from the Generic Specification, applicable to this specification only, are listed below.

Permitted deviations from the Generic Specification and this Detail Specification, formally agreed with specific Manufacturers on the basis that the alternative requirements are equivalent to the ESCC requirement and do not affect the component's reliability, are listed in the appendices attached to this specification.

2.1.1 Deviations from the Generic Specification

2.1.1.1 *Deviations from Screening Tests - Chart F3*

- (a) For heaters where the Heater Design Drawing requires the application of cover material or pressure sensitive tape the following additional steps shall be performed during Screening Tests:
- (i) An additional 100% External Visual Inspection shall be performed after successful completion of High and Low Temperatures Electrical Measurements.
 - (ii) After successful completion of the additional External Visual Inspection the cover material and/or pressure sensitive tape shall be applied.
For heaters which already have a backing foil applied the additional External Visual Inspection shall not be performed.
- (b) For heaters where the Heater Design Drawing requires pre-forming this shall be performed on successful completion of Screening Tests. The pre-forming operation shall be performed at a temperature not exceeding the maximum storage temperature. An additional External Visual Inspection shall be performed after the pre-forming operation to check for any damage.

2.2 MARKING

The marking shall be in accordance with the requirements of ESCC Basic Specification No. [21700](#) and as follows.

The information to be marked on the component shall be:

- (a) The ESCC qualified components symbol (for ESCC qualified components only).
- (b) The ESCC Component Number.
- (c) Traceability information.

2.3 ROBUSTNESS OF TERMINATIONS

The test conditions for robustness of terminations, tested as specified in the ESCC Generic Specification, shall be as follows and apply to a single terminal lead at a time.

Wire Gauge (AWG)	20	22	24	26	28	30
Pull Strength (N)	45	36	22	13	9	4.5
Duration (s) minimum	5	5	5	5	5	5

2.4 ELECTRICAL MEASUREMENTS AT ROOM, HIGH AND LOW TEMPERATURES

The measurements shall be performed at room, high and low temperatures.

2.4.1 Room Temperature Electrical Measurements

The measurements shall be performed at $T_{amb} = +22 \pm 3^{\circ}\text{C}$.

NOTES

1. Measurements shall be performed during Screening Tests on a sample of 3 components. In the event of any failure a 100% inspection shall be performed.

2.5 INTERMEDIATE AND END-POINT ELECTRICAL MEASUREMENTS

Unless otherwise specified, the measurements shall be performed at $T_{amb} = +22 \pm 3^{\circ}\text{C}$.

The test methods and test conditions shall be as per the corresponding test defined in Room Temperature Electrical Measurements.

The drift values (Δ) shall not be exceeded for each characteristic where specified. The corresponding absolute limit values for each characteristic shall not be exceeded.
